NOTE!

Since a tester cannot always duplicate actual joint characteristic, the torque reading displayed on the TorqueLab® may vary from the actual torque that a tool will apply to a joint. A run down adapter that simulates a variety of different joint characteristics is provided with the TL-Series. When critical assemblies are involved, the torque output of the power tool being used should be verified on the actual assembly using a calibrated measuring torque tool.

**CERTIFIED**

Supplied with NIST-Traceable Certification of Calibration

KEY FEATURES

Accuracy \pm 0.5% of reading from 20% to 100%. Accuracy \pm 1% of reading from 10% to 20%.

Recommended for most hand screwdrivers, wrenches, or power tools.

Features a built-in transducer and can connect to an external transducer.

Can store calibration data for up to 9 external transducers.

Four-digit display.

RS-232 interface to download readings in "real time".

Includes a PC Windows based software program: **Data Acquisition** for collecting and analyzing data with Microsoft Excel®.

Selection of three operating modes: Track, Peak, First Peak.

Seven units of torque measurement available: lbf.ft, lbf.in, ozf.in, N.m, cN.m, kgf.m, kgf.cm.

Manual and auto reset functions to clear displayed values.

Selectable filters to eliminate unwanted "noise": 500Hz, 1500Hz, 2000Hz, 3600Hz.

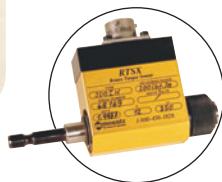

Features a Buzzer and Go / No Go LEDs that illuminate when high or low setting is achieved.

Dimensions: (L x W x H) 10 3/4" x 8 1/3" x 2 2/3"
4 mounting holes 3/8-16 x 0.70 DP

EXTERNAL TRANSDUCERS

The TorqueLab® features a built-in transducer and can connect to an external transducer.
