

## CONFIGURE, CONNECT, GO

- 8-slot mainframe with 19 mix-andmatch plug-in modules so you can create your own custom configuration
- High-performance switching: Up to 560 2-wire multiplexer channels or 1024 matrix cross-points in one mainframe
- Optional built-in $61 / 2$-digit DMM lets you make 11 measurements with up to 2000 readings/sec
- Easy to integrate: Built-in Ethernet, USB 2.0, and GPIB connectivity, standard connectors and software drivers for most common programming environments

# High-performance unit provides low-cost alternative to PXI and VXI switch and measurement platforms 

If you use automated test equipment for design validation or manufacturing, you now have a cost-effective alternative to PXI and VXI test-system platforms. The 34980A multifunction switch/measure unit provides comparable functionality that is much easier to use than PXI and VXI and costs less. The 34980A helps you lower your cost of test and accelerate your testsystem integration and development.

The 34980A handles your system switching needs up to 20 GHz and provides basic measurements and system control. It offers optional DMM measurements, counter/totalizer functionality, digital I/O with pattern capabilities, and analog outputs with basic waveforms-all in one low-cost, compact box. And with its standard connectors and software drivers, computer-standard I/O, and Web browser interface, the 34980A easily integrates into electronic functional test and data acquisition systems.

## Flexible switching, measurements, and system control

The 34980A accommodates up to 8 plug-in modules to give you the flexibility you need. Choose from 19 different modules to define your own configuration. You can buy what you need now and add to it or reconfigure it as your requirements change.

Whether you are measuring temperature, AC or DC voltage, resistance, frequency, current, or custom measurements, the 34980A offers the functionality you need in a single box. Switch in different measurements with high-performance signal switchingno external signal conditioning is required. Choose between different switch types and topologies with frequency ranges from DC to 20 GHz . The 34980A offers high-density multiplexers for scanning multiple channels, matrices for connecting multiple points at one time, and general purpose switches for simple control and high power needs.

Use the 34980A to route individual signals or monitor multiple signals over a specified period of timemonitor a single channel or multiple channels, set alarms, and identify irregularities.

The 34980A also offers flexible choices for system control. You can control external devices such as microwave switches, attenuators, solenoids, and power relays. Or use the digital inputs to sense limit-switch and digital-bus status.

## Optimized for test systems

The 34980A has the performance you need for medium- to high-density switching/measurement applications such as design verification, functional test and data acquisition. Your signals are switched to the right measurement device without compromising signal integrity. Switch your signals to the optional internal DMM and achieve optimal throughput on switch closure time. Or, if you prefer, you can easily connect to external instruments such as DMMs, scopes, power supplies, and more. What's more, with the built-in Ethernet interface, you can control the 34980A and collect data from remote locations.

The rugged instrument comes with a variety of system-ready features:

- Web browser interface shows settings at a glance and provides remote access and control
- Self-guiding front panel to configure, troubleshoot or view data
- Low EMI and efficient system cooling
- Heavy-duty cabling and connection options
- Rack mount options
- Relay counters help predict end-of-life
- In-rack calibration for reduced maintenance time
- DMM measurement accuracies include the switch for simple calculations

## Make system connections easily

 and quickly with simple, reliable connection options:- Built-in Ethernet, USB 2.0, and GPIB connectivity
- Standard IVI and LabVIEW software drivers
- Low-cost, standard 50- or 78-pin Dsub connectors and cables
- Detachable terminal blocks with strain relief
- Mass interconnect solutions

In addition, the 34980A comes with Agilent E2094N IO Libraries Suite 14.0. Quickly establish an error-free connection between your PC and instruments-regardless of vendor. The I/O Libraries provide robust instrument control and work with the software development environment you choose.

Easier signal routing with four 2 -wire internal analog buses. You can route your measurements directly to the internal DMM, or you can connect to external instruments through the analog bus connector on the rear of the mainframe. And since you have four 2 -wire buses, you can dedicate one bus for use with the internal DMM and use the other three buses for module extensions or additional signal routing between modules, reducing your wiring needs.

You can define switch sequences to control complex signal routing and the order of switch closures. Assign a sequence, give it a name and then execute it with the name you created. You also can define lists to identify channels that should never be connected together.

External trigger capabilities make it easy for you to time and synchronize measurements and other events. This can help you determine when to begin or end an acquisition.

## Measurements you can trust

Get proven performance from Agilent instruments, with the resolution, repeatability, speed, and accuracy you've come to expect.

The 34980A offers built-in signal conditioning and modular flexibility. When you use it with the internal DMM, you can configure each channel independently for the measurements you choose. It includes a variety of features that give you confidence in your measurements:

- $6 \frac{1}{2}$ digits of resolution with $.004 \%$ of accuracy with DC voltage measurements
- Alarms per channel-high limit, low limit, or both
- Math functions-use $\mathbf{M x}+\mathrm{B}$ for custom linear conversions and converting raw inputs
- Built-in thermocouple reference for temperature measurements (34921T)
- Time-stamped readings

The integrated DMM is mounted inside the mainframe and does not consume any of the eight useravailable slots. You can access the DMM through any switch module that connects to the analog bus, or directly from the analog bus connector on the rear of the mainframe. The internal DMM gives you the flexibility to measure 11 types of inputs:

- Temperature with thermocouples, RTDs, or thermistors (with 34921A)
- DC and AC voltage
- 2- and 4-wire resistance
- Frequency and period
- DC and AC current

You can control the DMM directly, or configure it to work in conjunction with the switches. Each switch channel can be configured independently for measurement functions, scale factors and alarm limits. Advanced measurement features such as offset compensation, variable integration time, and delay are also selectable on a perchannel basis.

The DMM inputs are shielded and optically isolated from the 34980A's earth-referenced circuitry and computer interface, and as a result, you get up to 300 V of input isolation. This is important for reducing ground-loops and common-mode voltage errors associated with long wiring runs and floating sources.

## Simple DMM calibration is

 accomplished with just the analog bus connection on the rear panel of the mainframe. You don't need to remove the mainframe from the rack or dedicate a channel for calibration.

## Modules provide flexible system stimulus and control

System control-with analog outputs, open-collector digital outputs, clock generation, and isolated Form-C relays for controlling external devices. Additionally, with the microwave switch/attenuator driver, highfrequency switches and attenuators can be efficiently controlled external to the 34980A mainframe.

Analog sources-output either voltage or current. You can configure the 4 -channel isolated $\mathrm{D} / \mathrm{A}$ converter as a point-to-point arbitrary waveform generator that lets you define up to 500,000 points per waveform.

Digital patterns-send or receive digital data from your device under test. With on-board memory you can output communication protocols and bit streams or monitor digital input patterns and interrupt when a userdefined pattern is detected.

## Standard interfaces take the hassle out of connecting to your PC

Standard Ethernet, USB and GPIB
interfaces are included in every mainframe. Use one of the interfaces that is already available in your computer, or if you prefer, GPIB is still available.

- USB offers the quickest and easiest connection scheme-it's perfect for small systems and bench connections.
- Ethernet offers high-speed connections that allow for remote access and control. Choose a local area network to filter out unwanted LAN traffic and speed up the I/O throughput. Or take advantage of the remote capabilities and distribute your tests worldwide. Monitor, troubleshoot, or debug your application remotely.
- GPIB has many years of proven reliability for instrument communication and can be used in existing GPIB based test systems.

Figure 1 The Web interface makes it easy to set up, troubleshoot and maintain your system remotely.

## Remote access and control

The built-in Web browser interface provides remote access and control of the instrument via a Java-enabled browser such as Internet Explorer. Using the Web interface, you can set up, troubleshoot, and maintain your system remotely.

- View and modify instrument setup
- Open, close, or monitor switches
- Send SCPI commands
- Define and execute switch sequences
- View error queue
- Get status reports on relay counts, firmware revisions, and more

Additionally, since the Web interface is built into the instrument, you can access it on any operating system that supports the Web browser without having to install any special software. Password protection and LAN lockout are also provided to limit access.

The Web interface makes it easy to set up, troubleshoot and maintain your system remotely.

Works with your choice of software so you can save time and preserve your software and hardware investments. You can program directly with SCPI, or use IVI or LabVIEW software drivers that provide compatibility with the most popular development environments and tools:

- Agilent VEE Pro, Agilent T\&M Toolkit (requires Microsoft ${ }^{\circledR}$ Visual Studio ${ }^{\circledR}$.NET)
- National Instruments LabVIEW, LabWindows/CVI, TestStand, and Switch Executive
- Microsoft Visual Studio.NET, C/C++ and Visual Basic 6

Power and flexibility to get your job done

Store up to 500,000 readings with timestamp

## Mix and match 34980A modules to <br> create your own custom configuration

The 34980A mainframe holds up to eight plug-in modules.
Mix and match them to create a custom system to meet your switching and system control needs. You can easily add or replace modules as your needs change.

Table 1. 34980A modules at a glance

| Module | Description | Max volts | Max current | $\begin{aligned} & \hline \begin{array}{l} \text { BW } \\ \text { (MHz) } \end{array} \end{aligned}$ | Scan <br> ch/sec | Thermal offset | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Multiplexer modules |  |  |  |  |  |  |  |
| 34921A | 40-channel armature multiplexer w/ low thermal offset | $\pm 300 \mathrm{~V}$ | 1A | 45 MHz | 100 | < 3 uV | Temperature reference 4 current channels Config as 2- or 4-wire |
| 34922A | 70-channel armature multiplexer | $\pm 300 \mathrm{~V}$ | 1A | 25 MHz | 100 | $<3 \mathrm{uV}$ | Config as 2- or 4-wire |
| 34923A | 40/80-channel reed multiplexer | $\pm 150 \mathrm{~V}$ | 0.5A | 45 MHz | 500 | < 50 uV | Config as 1-, 2- or 4 -wire |
| 34924A | 70 -channel reed multiplexer | $\pm 150 \mathrm{~V}$ | 0.5A | 25 MHz | 500 | < 50 uV | Config as 2- or 4 -wire |
| 34925 A | 40/80-channel optically isolated FET multiplexer | $\pm 80 \mathrm{~V}$ | 0.05A | 1 MHz | 1000 | < 3 uV | Config as 1-, 2- or 4-wire |
| Matrix modules |  |  |  |  |  |  |  |
| 34931A | Dual $4 \times 8$ armature matrix | $\pm 300 \mathrm{~V}$ | 1A | 30 MHz | 100 | < 3 uV | Backplane expandable |
| 34932A | Dual $4 \times 16$ armature matrix | $\pm 300 \mathrm{~V}$ | 1A | 30 MHz | 100 | $<3 \mathrm{uV}$ | Backplane expandable |
| 34933A | Dual/Quad 4x8 reed matrix | $\pm 150 \mathrm{~V}$ | 0.5A | 30 MHz | 500 | < 50 uV | Backplane expandable Config as 1 - or 2 -wire |
| General-purpose modules |  |  |  |  |  |  |  |
| 34937A | 28-channel Form C and 4-channel Form A | $\begin{aligned} & \hline 300 \mathrm{~V} \\ & 250 \mathrm{AC} \end{aligned}$ | $\begin{aligned} & \text { 1A } \\ & 5 A \end{aligned}$ | 10 MHz | N/A | $\begin{aligned} & <3 \mathrm{uV} \\ & <3 \mathrm{uV} \end{aligned}$ |  |
| 34938A | 20-channel 5-amp Form A | 250AC | 5A | 1 MHz | N/A | $<3 \mathrm{uV}$ |  |

RF and microwave modules

| System control modules | Description |  |
| :--- | :--- | :--- |
| 34950A | 64-bit digital I/O with memory <br> and counter | Eight 8-bit digital I/O channels with programmable polarity, thresholds up to 5 V, <br> with 7 handshaking protocols and pattern memory. Two $10-\mathrm{MHz}$ frequency counter/ <br> totalizers and programmable clock output to 10 MHz . |
| 34951A | 4-channel isolated D/A converter <br> with waveform memory | Output DC voltage up to $\pm 16 \mathrm{~V}$ or DC current up to $\pm 20 \mathrm{~mA}$. <br> Output waveforms with a 200 kHz update rate and 16 bits of resolution. <br> Use on-board memory to create point-to-point waveforms with more than 500,000 points. |
| 34952A | Multifunction module with 32-bit DIO, <br> 2-ch D/A and totalizer | Four 8-bit digital I/O channels, two $\pm 12$-V analog outputs, and a 100-kHz gated totalizer. |
| 34959A | Breadboard module | Create your own custom designs with access to the +12 V and +5 V supplies, <br> 16 GPIO ports and 32 relay drive lines. |

## 34980A multiplexer switch modules

The 34980A multiplexer modules can be used to connect one of many different points to a single point. You can connect to an external instrument, or scan multiple analog signals to the internal DMM.

Choose from the following features:

- 1-wire, 2-wire, or 4-wire configurations
- High voltage-up to 300 V, 1 A
- High-density-70 2-wire or 80 1-wire channels
- Bandwidths up to 45 MHz
- Temperature measurements with built-in thermocouple reference junction (34921T)
- AC or DC current measurements without external shunts
- Connections via standard 50- or 78-pin Dsub cables or detachable terminal block

Figure 2. 34921A 40-channel armature multiplexer with low thermal offset (bank 2)

Multiple multiplexers can connect to the built-in analog buses, allowing you to scan up to 5602 -wire channels or 640 1-wire channels in a single mainframe. The 34921A also offers 4 channels for directly measuring current. Or if you need more current channels, shunts can be added to the terminal block for easy current measurements.

The multiplexer modules feature break-before-make connections to ensure that no two signals are connected to each other during a scan. Or, if you prefer, you can control switching manually to create your own switch configuration. All the multiplexer switches have a relay counter to help predict when relays need to be replaced.

Figure 3. 34922A 70-channel armature multiplexer (bank 1 shown)

Figure 4. 34925A 40/80-channel optically isolated FET mux (shown in 1-wire mode bank 2)

Table 2. Multiplexer selection table-specifications and characteristics*

## 34980A matrix switch modules

The 34980A matrix modules are full cross-point matrices that allow you to connect any row to any column. This is a convenient way to connect multiple test instruments to multiple points on a device under test.

Choose from the following features:

- Latching armature relays-300 V, 1 A
- High-speed reed relays-150 V, 0.5 A
- Configurable dual $4 \times 8$ or dual $4 \times 16$ modules
- Single-wire configuration (34933A)
- Analog bus expandable rows to create larger matrices
- Connections via standard 50-pin Dsub cables or detachable terminal block

Each cross-point in the matrix switch has two wires-a high and a low for the measurement. Or, if you prefer, the 34933 A can be configured as a single-wire matrix, increasing the number of channels. The 34933A also has in-rush resistors on each column for added protection.

Combine multiple matrix modules through the 34980A analog buses to create a larger matrix. Two matrix rows also can be connected to the internal DMM for easy measurements.

Combine your matrix with a multiplexer switch to achieve the desired switching topology and get a lowercost solution with better specifications. All the matrix switches include a relay counter to help predict when relays need to be replaced. Use the sequencing feature to easily change between different cross-point setups.

[7] Power restrictions allow only 20 channels to be closed at one time

* See User's Guide for additional specifications

## 34980A general-purpose switch modules

The 34980A general-purpose switches can be used to route signals or to control other system devices. These switches are ideal for device actuation and switching loads or power supplies.

Choose from the following features:

- Form C channels up to $1 \mathrm{~A}, 50 \mathrm{~W}$
- Form A channels up to 5 A, 150 W

Figure 6. 34937A 32-channel Form A/ Form C switch

- Armature latching relays
- Simultaneous channel switching
- Temperature sensor to detect overheating conditions
- Connections via standard 50-pin Dsub cables or detachable terminal block

The 34937 A is the most versatile general-purpose switch with 28 Form C channels that can switch up to 1 A of current. In addition, this module has four Form A channels that can switch up to 5A of current. For power
switching applications, the 34938A has 205 -amp channels in a Form A topology. Each Form A general-purpose switch can handle up to 150 W , enough for many power line-switching applications.

The 34937A and 34938A contain latching armature relays where multiple channels can be closed at the same time. Additionally, for switching reactive loads, the optional terminal blocks have pads for snubbing circuits.

The built-in relay counter helps predict when relays need to be replaced.

## 34980A RF and microwave switch modules

The 34980A offers a variety of RF and microwave switch modulesRF multiplexers, SPDT switching from DC to 20 GHz , or a switch/ attenuator driver module that allows you to control switches or attenuators external to the 34980A mainframe.

## 34941A/42A-from DC to 3 GHz-

The RF switch modules can be used to switch signals from DC to 3 GHz and above. This can be useful for switching signals between oscilloscopes, spectrum analyzers, network analyzers, and other RF test equipment.

Choose from the following features:

- 50- or 75- ohm Quad 4-channel multiplexers
- DC to 3 GHz
- $30 \mathrm{~V}, 0.5 \mathrm{~A}, 10 \mathrm{~W}$

Figure 7. 34941A Quad 1x4 50 ohm 2 GHz multiplexer

The 34941A and 34942A are
configured as four independent 1 x 4 RF multiplexers on a single module. Multiple banks can be connected together to create a larger multiplexer -up to 97 RF multiplexer channels in a single 34980A mainframe. To prevent ground loops, individual multi-
plexers are isolated from each other and from the mainframe's chassis. However, the multiplexer channels can be chassis grounded with a simple change. Both 50 -ohm and 75 -ohm versions are available.

For typical switch performance graphs, contact factory.

Figure 8. 34946A dual 1x2 SPDT terminated microwave switch

## 34946A/47A-from DC to 20 GHz-

For applications where you need only a few high-frequency switches, the 34946A and 34947A offer single-pole, double-throw switches in either $4-\mathrm{GHz}$ or $20-\mathrm{GHz}$ options. These modules internally mount two or three independent Agilent N1810 series coaxial switches. These switches are well known for their excellent insertion loss, isolation and VSWR specifications. Switch read back capabilities allow you to query the position of the switch. You can choose higher density with the unterminated switches, or select the terminated switches to maintain impedance match.

Table 5. RF and microwave selection table-specifications and characteristics*

## 34945A/34945EXT microwave switch/attenuator driver

This module allows you to control switches attenuators, and other devices external to the 34980A.
The 34945A provides the power and control signals for many of the most popular microwave switches and attenuators. One 34945A/ 34945EXT combination can drive up to 64 switch coils-that's 32 standard SPDT switches. You can add up to seven more 34945EXT boards with external power to drive up to 512 coils from a single mainframe. Multiple switch operations are performed in sequential order, or for faster, simultaneous switching, you can connect an external power supply to the 34945 EXT.

Distribution boards enable simple connections to the external switches. The distribution boards plug onto the 34945EXT and are used to route the power and control signals from the driver module to the switches using standard cables.

The 34945A/34945EXT also has sensing capabilities that allows read back of the actual position of the switch or attenuator. Drive signals for LED indicators are also provided to give a visual indication of the switch position.

The following microwave switches and attenuators are supported with the distribution boards:

- N181x series SPDT switches
- 876x series SPDT switches (screw terminals)
- $87104 x / 106 x$ multiport switches
- 87406x series matrix switches
- $87204 x / 206 x$ series multiport switches
- 87606x series matrix switches
- 87222x transfer switches
- 849x series attenuators
- 8490x series attenuators
- Generic screw terminal connections

## 34980A system control modules

## 34950A 64-channel digital I/0 with memory and counter

This module can be used to simulate or detect digital patterns. It has eight 8 -bit digital I/O channels with handshaking, pattern memory, two $10-\mathrm{MHz}$ totalizers with gate functions, and a programmable clock output.

## Digital input/output

The digital $\mathrm{I} / \mathrm{O}$ bits are organized into two banks of 32 -bits. The I/O bits can be configured and programmed as inputs or outputs in 8-bit channels. The digital outputs can be configured as active drive or tristate outputs with user supplied pull up resistors for up to 5 V outputs. The digital inputs have programmable thresholds up to 5 V for compatibility with most digital logic standards.

The onboard pattern memory can be used to select and output digital stimulus or bitstream patterns, or to capture external digital data. Each bank has independent memory and directional control so that one bank can output data while the other captures data. The memory can be divided into 16 Kbytes per 8-bit channel, or you can specify all the memory onto a single channel on the bank, resulting in 64 Kbytes on each bank.

Specifically, the digital I/O channels also have:

- Variable active high drive output from 1.5 V to 5 V or tristate
- Variable input thresholds from 1.5 V to 5 V
- 7 configurable handshaking protocols including synchronous, asynchronous, and strobe
- Programmable polarity
- Source or sink up to 30 mA
- Internal alarming for maskable pattern match
- 1 hardware interrupt per bank
- Connections via standard 78-pin Dsub cables or detachable terminal block

## Frequency counter/totalizer

The two channels can be used to count events, frequency, period, duty cycle, totalize, and pulse width. The counter/totalizer also includes

- Programmable gate functionality
- Programmable input thresholds levels 1.5 V to 5 V

Figure 10. 34950A 64-channel digital I/O

## 34951A 4-channel isolated D/A converter with waveform memory

This module has four independent, isolated channels that output DC voltage up to $\pm 16 \mathrm{~V}$ or DC current up to $\pm 20 \mathrm{~mA}$. The gain and offset can be adjusted on-the-fly. Each channel can be controlled manually, or use the onboard memory to download a waveform. These waveforms can be dynamically allocated among one or more channels and output as a point-to-point arbitrary waveform generator at up to 200 k points/sec. You can use the standard sine, square or ramp wave shapes provided or define your own wave shape using over 500,000 points and output to a device under test.

The calibration command connects the D/A converters to the internal DMM to be automatically calibrated. Connections to the module can be made via standard 50-pin Dsub cables or a detachable terminal block.

General specifications

| Maximum update rate: | 200 kHz point-to-point |
| :---: | :---: |
| Monotonic : | to 16-bits |
| Isolation: | > 80 VDC/AC peak (chan-to-chassis or chan-to-chan) |
| Synchronization: | Software commands or external trigger |
| Internal/external CLK accuracy: | 100 ppm |
| AC accuracy: | Not specified |
| DC voltage |  |
| Amplitude: | $\pm 16 \mathrm{~V}$ up to 10 mA |
| Resolution: | 16 -bits $=500 \mathrm{uV}$ |
| Amplitude accuracy (DC): | $\begin{aligned} & \pm(0.05 \%+3.0 \mathrm{mV} \\ & \left(90 \text { days, } \mathrm{Tcal} \pm 5^{\circ} \mathrm{C}\right. \text { or } \\ & \left.{ }^{*} \mathrm{Cal} ? \pm 5^{\circ} \mathrm{C}\right) \end{aligned}$ |
| Ripple and noise: | $<2 \mathrm{mVrms}, 20 \mathrm{~Hz}$ to 250 kHz into $10 \mathrm{k} \Omega$ load |
| Settling time: | 40 uS (-full scale to +full scale step, single channel, to rated accuracy) |
| Output impedance: sensed | $<1 \Omega$ with the load |

| DC current |  | Trigger output |  |
| :---: | :---: | :---: | :---: |
| Range: | $\pm 20 \mathrm{~mA}$ | Level: | TTL compatible |
| Resolution: | 16-bit $=630 \mathrm{nA}$ |  | into $1 \mathrm{k} \Omega$ (3.3 V logic) |
| Accuracy: | $\pm$ (\% value + amps) (temperature within $\pm 5^{\circ} \mathrm{C}$ of Tcal or *Cal?) 90-day: $\pm(0.09 \%+5.0 u A)$ | Output impedance: | $50 \Omega$ typical |
|  |  | Clock input |  |
|  |  | Input level: | TTL compatible <br> (3.3 V logic, 5 V tolerant) |
| Ripple and noise: | $<2$ uArms, 20 Hz to 250 kHz into $250 \Omega$ | Input impedance: | $>10 \mathrm{k} \Omega$, DC |
| Compliance voltage: $\pm 12 \mathrm{~V}$ |  | Maximum rate: | 10 MHz |
|  |  | Clock output |  |
| voltage: | < $\pm 22 \mathrm{~V}$ | Level: | TTL compatible into $1 \mathrm{k} \Omega$ (3.3 V logic) |
| Phase-locking I/ 0 trigger characteristics |  | Output impedance: | $50 \Omega$ typical |
| Trigger input |  | Maximum rate: | 10 MHz |
| Input level: | TTL compatible (3.3 V logic, 5 V tolerant) | Accuracy: | $\pm 100 \mathrm{ppm}$ |
| Slope: | Rising or falling, selectable |  |  |
| Pulse width: | $>100 \mathrm{nS}$ |  |  |

Figure 11. 34951A 4-channel isolated D/A converter

## 34952A multifunction module

 with 32 -bit DIO, 2-channel D/A and totalizerThe multifunction module offers the flexibility you need for system control. The 34952A has four 8-bit digital I/O channels, a $100-\mathrm{kHz}$ gated totalizer, and two $\pm 12 \mathrm{~V}$ analog outputs-all on a single earth-referenced module. The digital inputs and totalizer input may be included in a scan list. Alarm limits for the digital and totalizer inputs are evaluated continuously, capturing and logging alarm conditions even between scans. Connections can be made via standard 50-pin Dsub cables or detachable terminal block.

| Digital input/output characteristics |  |
| :---: | :---: |
| Four 8-bits channels, 8 bits wide, input or output, non-isolated |  |
| Vin(L) | $<0.8 \mathrm{~V}$ (TTL) |
| Vin(H) | $>2.0 \mathrm{~V}$ (TTL) |
| Vout(L) | $<0.8 \mathrm{~V}$ @ lout $=-400 \mathrm{~mA}$ |
| Vout(H) | $>2.4 \mathrm{~V}$ @ lout $=1 \mathrm{~mA}$ |
| Vout(H) max | $<42 \mathrm{~V}$ with external open drain pull-up |
| Alarm | Maskable pattern match or state change |
| Speed pling | 4 ms (max) alarm sam- |
| Latency | 5 ms (typical) to 34980A alarm output |
| Read/write speed | 95/s |

Totalize input characteristics

| Max count | $2^{26-1}$ |
| :--- | :--- |
| Totalize input | $100 \mathrm{kHz}(\mathrm{max})$ rising or <br> falling edge, <br> programmable |
| Signal level | $1 \mathrm{Vp-p}$ (min) 42 Vpk (max) |
| Threshold | 0 V or TTL |
| Gate input | TTL-Hi, TTL-Lo, or none |
| Count reset | Manual or read + reset |
| Read speed | $85 \mathrm{rds} / \mathrm{s}$ |

Analog output characteristics

| DAC 1,2 | $\pm 12 \mathrm{~V}$, non-isolated |
| :--- | :--- |
| Resolution | 1 mV |
| IOUT | 10 mA max |
| Settling time | 1 ms to $0.01 \%$ of output |
| Accuracy | $\pm(\%$ of output +mV$)$ |
| 1 year | $\pm 5^{\circ} \mathrm{C} 0.25 \%+20 \mathrm{mV}$ |
| Temp. coefficient | $\pm(0.015 \%+1 \mathrm{mV}) /{ }^{\circ} \mathrm{C}$ |

Figure 12. 34952A multifunction module

## 34959A breadboard module

Use this module to create your own custom designs inside the 34980A mainframe. You can control your custom circuits with access to both the +12 V and +5 V supplies, 32 relay drive lines and two 8-bit GPIO ports. Your design can be isolated from the analog buses or connected by loading the backplane switches. Simply mount your custom PC board or other components into the space provided and connect via the two ribbon connectors provided. The module is provided with two 50- or 78-pin Dsub connector openings. For custom connections, use the detachable flat faceplates for easy modification. You can program your circuitry using standard read and write commands in SCPI.

General specifications

| Max module power dissipation | 6 W |
| :--- | :--- |
| Power available |  |
| 12 V regulation no load to full load | $10 \%$ |
| 5 V regulation no load to full load | $5 \%$ |
| Max power from 12 V | 6 W |
| Max power from 5 V | 1 W |
| Relay drives | 32, sink up to 100 mA |
| GPIO ports |  |
| Chan 1: | $1-8$ configure byte as input or <br> output |
| Chan 2: | $9-16$ configure bits individually  <br>   <br> as input or outputs  |

Available board dimensions:
$5.4 \times 7.5 \times$ either 0.9 inches height without PC board, or 0.7 inches high with PC board.

[1] One hour warm-up and a fixed configuration with slow $A C$ filter, sine wave input, and $6 / / 2$ digits. Temperature within $\pm 5^{\circ} \mathrm{C}$ of temperature at calibration (Tcal between $18-28^{\circ} \mathrm{C}$ ).
[2] 90 minute warm-up and a fixed configuration and $6 / 2$ digits. Temperature within $\pm 1^{\circ} \mathrm{C}$ of temperature at calibration (Tcal between $18-28^{\circ} \mathrm{C}$ ).
[3] Relative to calibration standards
[4] $20 \%$ over range on all ranges except 300VDC and $A C$ ranges and 1 ADC and $A C$ current ranges
[5] For singe wave input > 5\% of range. For inputs from $1 \%$ to $5 \%$ of range and $<50 \mathrm{kHz}$ add $0.1 \%$ of range additional error. For AC filter slow.
[6] Typically $30 \%$ of reading error at 1 MHz , limited to $1 \times 108$ volt-hertz
[7] For 4-wire ohms or 2-wire ohms using scaling to remove offset. Add 4 ohms additional error to 2 -wire ohms function without scaling.
[8] Input $>100 \mathrm{mV}$. For 10 mV inputs multiply $\%$ of reading error $\times 10$. For 1 sec aperture.
[9] Specified only for inputs > 10 mA For AC filter slow.

Temperature measurement accuracy $\pm$ (\% of reading $+\%$ of range)

[1] For total measurement accuracy, add temperature probe error

Typical system speeds-Contact factory
Single channel measurement rates-DMM reading rates

| Function | Resolution | rds $/ \mathbf{s}$ |
| :--- | :--- | :--- |
| DCV, 2-wire resistance | $4-1 / 2$ digits $(0.02 \mathrm{plc})$ | $>2000$ |
| Thermocouple | $(0.02$ plc $) 0.1^{\circ} \mathrm{C}(1 \mathrm{plc})$ | Contact factory |
| RTD, thermistor | $1^{\circ} \mathrm{C}(0.02 \mathrm{plc})$ | Contact factory |
| ACV | $6-1 / 2$ digits | 250 |
| Frequency, period | $4-1 / 2$ digits $(10 \mathrm{~ms})$ | Contact factory |

## Measurement characteristics with optional internal DMM

| DC voltage |  |
| :--- | :--- |
| Measurement method | Continuously integrating multi-slope <br> III A-D converter |
| A-D linearity | $0.0002 \%$ of reading $+0.0001 \%$ of <br> range on 10 V range |
| Input resistance <br> $100 \mathrm{mV}, 1 \mathrm{~V}, 10 \mathrm{~V}$ ranges <br> $100 \mathrm{~V}, 300 \mathrm{~V}$ ranges | Selectable $10 \mathrm{M} \Omega$ or $>10,000 \mathrm{M} \Omega$ <br> $10 \mathrm{M} \Omega \pm 1 \%$ |
| Input bias current | $<50 \mathrm{pA}$ at $25^{\circ} \mathrm{C}$ |
| Input protection | 300 V all ranges |
|  | AC coupled True RMS-measures <br> the AC component of the input with <br> up to 300 VDC of bias on any range |
| True RMS AC voltage | Maximum of $5: 1$ at full scale |
| Measurement method | Crest factor $1-20.05 \%$ of reading <br> Crest factor $2-30.15 \%$ of reading <br> Crest factor 3-4 $0.30 \%$ of reading |
| Crest factor | Crest factor 4-5 $0.40 \%$ of reading |
| Additional crest factor |  |
| errors (non-sinewave) | $1 \mathrm{M} \Omega \pm 2 \%$ in parallel with 150 pF |
| Input impedance | 300 Vrms all ranges |
| Input protection |  |

| Resistance |  |
| :--- | :--- |
| Measurement method | Selectable 4-wire or 2-wire ohms |
| Current source | referenced to LO input |
| Offset compensation | Selectable on $100 \Omega, 1 \mathrm{k} \Omega$, <br> $10 \mathrm{k} \Omega$ ranges |
| Maximum lead resistance | $10 \%$ of range per lead for $100 \Omega$ <br> and $1 \mathrm{k} \Omega$ ranges. $1 \mathrm{k} \Omega$ on all <br> other ranges |
| Input protection | 300 V on all ranges |

Frequency and period

| Measurement method | Reciprocal counting technique |
| :--- | :--- |
| Voltage ranges | Same as AC voltage function |
| Gate time | $1 \mathrm{~s}, 100 \mathrm{~ms}$, or 10 ms |
| Measurement timeout | Selectable $3 \mathrm{~Hz}, 20 \mathrm{~Hz}, 200 \mathrm{~Hz} \mathrm{LF}$ limit |

DC current

| Shunt resistance | $5 \Omega$ for $10 \mathrm{~mA}, 100 \mathrm{~mA} ;$ <br> $0.1 \Omega$ for 1 A |
| :--- | :--- |
| Input protection | 1 A 250 V fuse on 34921 A module |
|  |  |
| True RMS AC current | Direct coupled to the fuse and shunt. <br> AC coupled True RMS measurement <br> (measures the ac component only) |
| Measurement method | $5 \Omega$ for $10 \mathrm{~mA} ; 0.1 \Omega$ for $100 \mathrm{~mA}, 1 \mathrm{~A}$ |
| Shunt resistance | 1 A 250 V fuse on 34921 A module |
| Input protection |  |

## Thermocouple

| Conversion | ITS-90 software compensation |
| :--- | :--- |
| Reference junction type | Internal, fixed, or external |
| Open thermocouple check | Selectable per channel. Open $>5 \mathrm{k} \Omega$ |
| Thermistor | $44004,44007,44006$ series |
| RTD | $\mathrm{a}=0.00385$ (DIN) and a $=0.00392$ |
|  |  |
| Measurement noise rejection $\mathbf{6 0} \mathbf{( 5 0 ) ~ H z ~}{ }^{[1]}$ |  |
| DC CMRR | 140 dB |
| AC CMRR | 70 dB |

| Integration time | Normal mode rejection ${ }^{[2]}$ |
| :--- | :--- |
| $200 \mathrm{plc} / 3.33 \mathrm{~s}(4 \mathrm{~s})$ | $105 \mathrm{~dB}^{[3]}$ |
| $100 \mathrm{plc} / 1.67 \mathrm{~s}(2 \mathrm{~s})$ | $100 \mathrm{~dB}^{[3]}$ |
| $20 \mathrm{plc} / 333 \mathrm{~ms}(400 \mathrm{~ms})$ | $95 \mathrm{~dB}^{[3]}$ |
| $10 \mathrm{plc} / 167 \mathrm{~ms}(200 \mathrm{~ms})$ | $90 \mathrm{~dB}{ }^{[3]}$ |
| $2 \mathrm{plc} / 33.3 \mathrm{~ms}(40 \mathrm{~ms})$ | 85 dB |
| $1 \mathrm{plc} / 16.7 \mathrm{~ms}(20 \mathrm{~ms})$ | 60 dB |
| $<1 \mathrm{plc}$ | 0 dB |
| DC CMRR 140 dB |  |
| AC CMRR 70 dB |  |

[1] For $1 \mathrm{~K} \Omega$ unbalance in LO lead
[2] For power line frequency $\pm 0.08 \%$
[3] For power line frequency $\pm 1 \%$ use 75 dB or $\pm 2.5 \%$ use 60 dB
[4] Reading speeds for 60 Hz and ( 50 Hz ) operation
[5] For fixed function and range, readings to memory, scaling and alarms off, autozero off
[6] Maximum limit with default settling delays defeated
[7] Speeds are for $4 / 2$ digits, delay 0 , display off, autozero off
[8] Isolation voltage (ch - ch, ch - earth) $300 \mathrm{VDC}, \mathrm{AC}$ rms
[9] $61 / 2$ digits $=22$ bits, $5 / 2 / 2$ digits $=18$ bits, $4 / 2$ digits $=15$ bits
[10] Assumes relative time format (time since start of scan)

## System specifications

| Scanning inputs |  |
| :--- | :--- |
| Analog: | 34921A, 34922A, 34923A, 34924A, and <br> 34925A multiplexer channels |
| Digital: | 34950A/52A digital in and totalize |
| Scan triggering | Interval, external, button press, software, <br> or on monitor channel alarm |
| Source | 1 to 50,000 or continuous |
| Scan count | 0 to 99 hours; 1 ms step size |
| Scan interval | 0 to 60 seconds per channel; 1 ms step size |
| Channel delay | $<2 \mathrm{~ms}$. With monitor on $<200 \mathrm{~ms}$ |
| External trig delay | $<2 \mathrm{~ms}$ |
| External trig jitter |  |

Alarms

| Analog inputs | $\mathrm{Hi}, \mathrm{Lo}$, or $\mathrm{Hi}+$ Lo evaluated each scan |
| :--- | :--- |
| Digital inputs | $34950 \mathrm{~A} / 52 \mathrm{~A}$ digital in maskable pattern <br> match or state change |
|  | $34950 \mathrm{~A} / 52 \mathrm{~A}$ frequency and totalize: <br>  <br>  <br>  <br>  <br> Hi limit only |
| Alarm evaluated each reading |  |
| Alarm outputs channel | 4 TTL compatible <br> Selectable TTL logic Hi or Lo on fail |
| Latency | 5 ms (typical) |

| Memory |  |
| :--- | :--- |
| Type | Volatile |
| Readings | 500,000 with timestamp, readable during scan |
| States | 5 instrument states with user label |
| Alarm queue | Up to 20 events with channel number, reading, <br> and timestamp |

System features

| Per-channel math <br> Min/max/average | Individual $\mathrm{Mx}+\mathrm{B}$ scaling and calculated real <br> time |
| :--- | :--- |
| Power fail recovery | Save switch states |
| Relay maintenance | Counts each relay closure and stores on <br> module User resettable |
| Real-time clock | Battery-backed, 20-year typical life |

## General specifications

| Power supply | Universal 100 V to $240 \mathrm{~V} \pm 10 \%$ |
| :---: | :---: |
| Power line frequency | $50-60 \mathrm{~Hz} \pm 10 \%$ automatically sensed |
| Power consumption | 150 VA |
| Operating environment | Full accuracy for $0^{\circ} \mathrm{C}$ to $55^{\circ} \mathrm{C}$ Full accuracy to $80 \%$ R.H. at $40^{\circ} \mathrm{C}$ IEC 60664-1 pollution degree 1 |
| Storage environment | $-40^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}{ }^{[1]}$ |
| Mainframe dimensions | $133 \mathrm{H} \times 426 \mathrm{~W} \times 341 \mathrm{D} \mathrm{~mm}\left(5.25^{\prime \prime} \times 16.8^{\prime \prime} \times 14^{\prime \prime}\right)$ <br> Full rack, 3 units high |
| Mainframe weight: | 8.8 kg (19.6 lbs) |
| Module dimensions | $280 \times 170 \times 27 \mathrm{~mm}$ (11" $\left.\times 6.7^{\prime \prime} \times 1^{\prime \prime}\right)$ |
| Safety conforms to | CSA, UL/IEC/EN 61010-1 |
| EMC conforms to | IEC/EN 61326-1, CISPR 11 |
| Warranty | 1 year |

## Software

| Agilent connectivity software included |  |
| :---: | :---: |
| Agilent IO Libraries Suite 14.0 (E2094N) |  |
| Minimum system requirements (10 libraries and drivers) |  |
| PC hardware | Intel Pentium 100 MHz , 64 Mbyte RAM, 210 Mbyte disk space Display $800 \times 600,256$ colors, CD-Rom drive |
| Operating system ${ }^{[2]}$ | Windows ${ }^{\circledR} 98$ SE/NT/2000/XP |
| Computer interfaces | Standard LAN 10BaseT/100BaseTx <br> Standard USB 2.0 <br> IEEE 488.2 GPIB |
| Software driver support for programming languages |  |
| Software drivers: | IVI-C and IVI COM for Windows NT/2000/XP |
| Compatible with progr | g tools and environments: <br> Agilent VEE Pro, Agilent T\&M Toolkit (requires Visual Studio.NET) <br> National Instruments Test Stand, <br> Measurement Studio, LabWindows/CVI, <br> LabVIEW, Switch Executive <br> Microsoft Visual Studio.NET, C/C++, <br> Visual Basic 6 |

[1] Storage at temperatures above $40^{\circ} \mathrm{C}$ will decrease battery life
[2] Load IO Libraries Version M for Windows NT support

## Ordering information

|  | Description | Optional terminal block | Interconnect cables / connector kits | Comments |
| :---: | :---: | :---: | :---: | :---: |
| Mainframe |  |  |  |  |
| 34980A | Multifunction switch/measure mainframeholds up to 8 plug-in modules | N/A | N/A | Only available with option "DMM" at this time |
| Multiplexer modules |  |  |  |  |
| 34921A | 40-channel armature multiplexer w/low thermal offset | 34921T | Oty 2 per module Y1135A-1.5m Y1136A-3m Y1139A | Order 34921T for temp reference |
| 34923A | 40/80-channel reed multiplexer | 34923 T (1 or 2 wire) |  |  |
| 34925A | 40/80-channel optically isolated FET multiplexer | 34925 T (1 or 2 wire) |  |  |
| 34922 A | 70-channel armature multiplexer | $34922 T$ | $\begin{array}{\|c} \text { Oty } 2 \text { per module } \\ \text { Y1137A }-1.5 \mathrm{~m} \\ \text { Y1138A }-3 \mathrm{~m} \\ \text { Y1140A } \end{array}$ |  |
| 34924A | 70-channel reed multiplexer | 34924 T |  |  |
| Matrix modules |  |  |  |  |
| 34931A | Dual $4 \times 8$ armature matrix | 34931T | $\begin{gathered} \text { Oty } 2 \text { per module } \\ \text { Y1135A-1.5m } \\ \text { Y1136A }-3 \mathrm{~m} \\ \text { Y1139A } \end{gathered}$ |  |
| 34932A | Dual $4 \times 16$ armature matrix | 34932T |  |  |
| 34933A | Dual/quad 4x8 reed matrix | 34933 T (1 or 2 wire) |  |  |
| GP/actuator modules |  |  |  |  |
| 34937A | 32-channel Form C/Form A general-purpose switch | 34937 T | $\begin{array}{\|c} \text { Oty } 2 \text { per module } \\ \text { Y1135A }-1.5 \mathrm{~m} \\ \text { Y1136A }-3 \mathrm{~m} \\ \text { Y1139A } \end{array}$ |  |
| 34938A | 20-channel 5-amp Form A switch | 34938 T |  |  |
| RF and microwave modules |  |  |  |  |
| 34941A | Quad 1x4 50-ohm 2-GHz RF multiplexer | N/A | N/A | Requires standard SMA cables and adapters |
| 34942A | Quad 1x4 75-ohm RF multiplexer | N/A | N/A | Requires mini 75 ohm cables and adapters |
| 34945A | Microwave switch/attenuator driver | N/A | N/A | Requires 34945EXT and optional distribution boards |
| $\begin{aligned} & \hline 34946 A \\ & 004 \\ & 020 \end{aligned}$ | Dual 1x2 SPDT terminated microwave switch 4 GHZ switches installed 20 GHz switches installed | N/A | N/A | Requires standard SMA cables and adapters |
| $\begin{aligned} & 34947 A \\ & 004 \\ & 020 \end{aligned}$ | Triple 1x2 SPDT unterminated microwave switch 4 GHZ switches installed 20 GHz switches installed | N/A | N/A | Requires standard SMA cables and adapters |
| System measurement and control modules |  |  |  |  |
| 34950A | 64-bit digital I/O with memory and counter | 34950 T | $\begin{gathered} \text { Oty } 2 \text { per module } \\ \text { Y1137A - 1.5m } \\ \text { Y1138A - 3m } \\ \text { Y1142A } \end{gathered}$ |  |
| 34951A | 4-channel isolated D/A converter with waveform Memory | 34951T | Oty 1 per module Y1135A-1.5m Y1136A - 3m Y1141A | "DMM" option required for calibration Single 50 pin Dsub connector |
| 34952A | Multifunction module with 32-bit DIO, 2-ch D/A and Totalizer | 34952T |  | Single 50 pin Dsub connector |
| 34959A | Breadboard module | N/A |  | Any terminal block can be used assuming 50 or 78 pin Dsub is used |

| Accessories |  |
| :---: | :---: |
| Y1130A | Rackmount kit for 34980A, forward or reverse mount |
| Cables/connector Kits |  |
| Y1135A | 1.5m 50pin Dsub, M/F twisted pair with outer shield cable - 300 V |
| Y1136A | 3 m 50 pin Dsub, M/F twisted pair with outer shield cable - 300 V |
| Y1137A | 1.5m 78pin Dsub, M/F twisted pair with outer shield cable - 300V |
| Y1138A | 3 m 78 pin Dsub, M/F twisted pair with outer shield cable - 300 V |
| Y1139A | Solder cup connector kit for 34921/23/25/31/32/33/37/38-50 pin Dsub female-125 V |
| Y1140A | Solder cup connector kit for 34922, 34924-78 pin Dsub female - 60 V |
| Y1141A | Solder cup connector kit for 34951, 34952-50 pin Dsub male - 125V |
| Y1142A | Solder cup connector kit for the 34950A - 78 pin Dsub male - 60 V |
| 34945A accessories |  |
| 34945EXT | External driver for 34945A, one required for each 64 coils |
| Y1150A | 34945A distribution board for 8 N181x SPDT switches |
| Y1151A | 34945A distribution board for two 87104x/106x multiport or 87406B matrix switches |
| Y1152A | 34945A distribution board for one 87204x/206x or 87606B switch and two N181x switches |
| Y1153A | 34945A distribution board for two 84904/5/8x or 8494/5/6 step attenuators |
| Y1154A | 34945A distribution board for two 87222 transfer switches and six N181x SPDT switches |
| Y1155A | 34945A distribution board w/ generic screw terminals for driving 16 switch coils |
| Thermocouples/thermistors |  |
| 34307 A | 10 pack of J type thermocouples |
| 34308A | 5 pack of 10k thermistors |

Agilent Technologies' Test and Measurement Support, Services, and Assistance
Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Support is available for at least five years beyond the production life of the product. Two concepts underlie Agilent's overall support policy: "Our Promise" and "Your Advantage."

## Our Promise

Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you receive your new Agilent equipment, we can help verify that it works properly and help with initial product operation.

## Your Advantage

Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and onsite education and training, as well as design, system integration, project management, and other professional engineering services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.

## Agilent Email Updates

www.agilent.com/find/emailupdates Get the latest information on the products and applications you select.

Agilent T\&M Software and Connectivity Agilent's Test and Measurement software and connectivity products, solutions and developer network allows you to take time out of connecting your instruments to your computer with tools based on PC standards, so you can focus on your tasks, not on your connections. Visit www.agilent.com/find/connectivity for more information.
