## Definitions

All specifications apply over a $5^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ range (unless otherwise stated) and 90 minutes after the instrument has been turned on.

## Specification (spec.):

Warranted performance. Specifications include guardbands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Supplemental information is intended to provide information that is helpful for using the instrument but that is not guaranteed by the product warranty. This information is denoted as either typical or nominal.

## Typical (typ.):

Expected performance of an average unit that does not include guardbands. It is not guaranteed by the product warranty.

## Nominal (nom.):

A general, descriptive term that does not imply a level of performance. It is not guaranteed by the product warranty.

## Corrected system performance

The specifications in this section apply for measurements made with the Agilent E5070B/E5071B network analyzer with the following conditions:

- No averaging applied to data
- Environmental temperature of $23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$, with less than $1^{\circ} \mathrm{C}$ deviation from the calibration temperature
- Response and isolation calibration not omitted

## Table 1-1

System dynamic range ${ }^{1,2}$

| Description | Specification | Supplemental information |
| :--- | :--- | :--- |
| System dynamic range |  |  |
| 300 kHz to 3 MHz , IF bandwidth $=3 \mathrm{kHz}$ | 85 dB |  |
| 3 MHz to 1.5 GHz IF bandwidth $=3 \mathrm{kHz}$ | 95 dB | 98 dB |
| 1.5 GHz to 3 GHz , IF bandwidth $=3 \mathrm{kHz}$ | 97 dB | 100 dB |
| 3 GHz to 4 GHz, IF bandwidth $=3 \mathrm{kHz}$ | 96 dB | 99 dB |
| 4 GHz to 6 GHz , IF bandwidth $=3 \mathrm{kHz}$ | 92 dB | 90 dB |
| 6 GHz to 7.5 GHz , IF bandwidth $=3 \mathrm{kHz}$ | 87 dB | 83 dB |
| 7.5 GHz to 8.5 GHz , IF bandwidth $=3 \mathrm{kHz}$ | 80 dB | 110 dB |
| 300 kHz to 3 MHz IF bandwidth $=10 \mathrm{~Hz}$ |  | 123 dB |
| 3 MHz to 1.5 GHz , IF bandwidth $=10 \mathrm{~Hz}$ | 120 dB | 125 dB |
| 1.5 GHz to 3 GHz , IF bandwidth $=10 \mathrm{~Hz}$ | 122 dB | 124 dB |
| 3 GHz to 4 GHz , IF bandwidth $=10 \mathrm{kHz}$ | 121 dB | 119 dB |
| 4 GHz to 6 GHz, IF bandwidth $=10 \mathrm{~Hz}$ | 117 dB | 115 dB |
| 6 GHz to 7.5 GHz , IF bandwidth $=10 \mathrm{~Hz}$ | 112 dB | 108 dB |
| 7.5 GHz to 8.5 GHz , IF bandwidth $=10 \mathrm{~Hz}$ | 105 dB |  |

[^0]Table 1-2 Corrected system performance with type-N device connectors, 85032F calibration kit
Network analyzer: E5070B/E5071B, calibration kit: 85032F (type-N, $50 \Omega$ ), calibration: full 2-port
IF bandwidth $=10 \mathrm{~Hz}$, No averaging applied to data, environmental temperature $=23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ with $<1^{\circ} \mathrm{C}$ deviation from calibration temperature, isolation calibration not omitted

## Test port output (source)

Table 1-7
Test port output frequency

| Description | Specification | Supplemental information |
| :--- | :--- | :--- |
| Range |  |  |
| E5070B | 300 kHz to 3 GHz |  |
| E5071B | 300 kHz to 8.5 GHz |  |
| Resolution | 1 Hz | $\pm 5 \mathrm{ppm}\left(5^{\circ} \mathrm{C}\right.$ to $40^{\circ} \mathrm{C}$, typical) |
| Source stability |  | $\pm 0.05 \mathrm{ppm} \mathrm{(233}^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$, typical) |
| Option E5070B/E5071B-UNQ | $\pm 0.5 \mathrm{ppm} /$ year (typical) |  |
| Option E5070B/E5071B-1E5 |  |  |
| CW accuracy |  |  |
| Option E5070B/E5071B-UNO | $\pm 5 \mathrm{ppm}, 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ |  |
| Option E5070B/E5071B-1E5 | $\pm 1 \mathrm{ppm}, 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ |  |
|  |  |  |

## Test port output (source)

Table 1-8
Test port output power ${ }^{1}$

| Description | Specification | Supplemental information |
| :---: | :---: | :---: |
| Level accuracy (at $23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ ) |  |  |
| 300 kHz to 10 MHz |  | $\pm 1.0 \mathrm{~dB}$ (at 0 dBm , relative to 50 MHz reference) |
| 10 MHz to 8.5 GHz | $\pm 0.650 \mathrm{~dB}$ (at $0 \mathrm{dBm}, 50 \mathrm{MHz}$ absolute, source attenuator 0 dB ) $\pm 1.0 \mathrm{~dB}$ (at 0 dBm , relative to 50 MHz reference, source attenuator 0 dB ) |  |
| Level accuracy (high temperature mode: on) |  |  |
| 300 kHz to 8.5 GHz |  | $\pm 0.8 \mathrm{~dB}$ (at $0 \mathrm{dBm}, 50 \mathrm{MHz}$ absolute, source attenuator 0 dB ) $\pm 1.5 \mathrm{~dB}$ (at 0 dBm , relative to 50 MHz reference, source attenuator 0 dB ) |
| Level accuracy (swept mode: on) |  |  |
| 300 kHz to 4.25 GHz |  | $\pm 2.5 \mathrm{~dB}$ (at 0 dBm , relative to 50 MHz reference, source attenuator 0 dB ) |
| 4.25 GHz to 8.5 GHz |  | $\pm 3.5 \mathrm{~dB}$ (at 0 dBm , relative to 50 MHz reference, source attenuator 0 dB ) |
| Level linearity (at $23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}$ ) |  |  |
| 10 MHz to 3 GHz | $\pm 0.75 \mathrm{~dB}$ (at -15 dBm to 10 dBm ) |  |
| 3 GHz to 4.25 GHz | $\pm 0.75 \mathrm{~dB}$ (at -15 dBm to 9 dBm ) |  |
| 4.25 GHz to 6 GHz | $\pm 0.75 \mathrm{~dB}$ (at -10 dBm to 7 dBm ) |  |
| 6 GHz to 8.5 GHz | $\pm 0.75 \mathrm{~dB}$ (at -15 dBm to 5 dBm ) |  |
| Level linearity (high temperature mode: on) |  |  |
| 300 kHz to 3 GHz |  | $\pm 1.5 \mathrm{~dB}$ (at -15 dBm to 10 dBm ) |
| 3 GHz to 4.25 GHz |  | \pm 1.5 dB (at -15 dBm to 9 dBm$)$ |
| 4.25 GHz to 6 GHz |  | $\pm 2.0 \mathrm{~dB}$ (at -15 dBm to 7 dBm ) |
| 6 GHz to 8.5 GHz |  | $\pm 2.0 \mathrm{~dB}$ (at -15 dBm to 5 dBm ) |
| Level linearity (swept mode: on) |  |  |
| 300 kHz to 3 GHz |  | $\pm 1.5 \mathrm{~dB}$ (at -15 dBm to 10 dBm ) |
| 3 GHz to 4.25 GHz |  | $\pm 1.5 \mathrm{~dB}$ (at -15 dBm to 9 dBm ) |
| 4.25 GHz to 6 GHz |  | $\pm 3 \mathrm{~dB}$ (at -15 dBm to 7 dBm ) |
| 6 GHz to 8.5 GHz |  | $\pm 3 \mathrm{~dB}$ (at -15 dBm to 5 dBm ) |
| Range (source attenuator 0 dB ) |  |  |
| 300 kHz to 3 GHz | -15 dBm to 10 dBm |  |
| 3 GHz to 4.25 GHz | -15 dBm to 9 dBm |  |
| 4.25 GHz to 6 GHz | -15 dBm to 7 dBm |  |
| 6 GHz to 8.5 GHz | -15 dBm to 5 dBm |  |
| Range (with source attenuators) |  |  |
| 300 kHz to 3 GHz |  | -50 dBm to 10 dBm (non-harmonics spurious may limit power range) |
| 3 GHz to 4.25 GHz |  | -50 dBm to 9 dBm (non-harmonics spurious may limit power range) |
| 4.25 GHz to 6 GHz |  | -50 dBm to 7 dBm (non-harmonics spurious may limit power range) |
| 6 GHz to 8.5 GHz |  | -50 dBm to 5 dBm (non-harmonics spurious may limit power range) |
| Sweep range (source attenuator 0 dB ) |  |  |
| 300 kHz to 3 GHz | -15 dBm to 10 dBm | -20 dBm to 10 dBm |
| 3 GHz to 4.25 GHz | -15 dBm to 9 dBm | -20 dBm to 9 dBm |
| 4.25 GHz to 6 GHz | -15 dBm to 7 dBm | -20 dBm to 7 dBm |
| 6 GHz to 8.5 GHz | -15 dBm to 5 dBm | -20 dBm to 5 dBm |
| Level resolution | 0.05 dB |  |

## Test port output (source)

## Table 1-9

Test port output signal purity

| Description | Specification |
| :--- | :--- |
| Harmonics (2nd or 3rd) | Supplemental information |
| 10 MHz to 2 GHz | $<-25 \mathrm{dBc}($ at 5 dBm, typical) |
| 2 GHz to 3 GHz | $<-15 \mathrm{dBc}($ at 5 dBm, typical) |
| 3 GHz to 8.5 GHz | $<-10 \mathrm{dBc}$ (at 5 dBm, typical) |
| Non-harmonic spurious | $<-25 \mathrm{dBc}$ (at 5 dBm, typical) |
| 10 MHz to 3 GHz | $<-10 \mathrm{dBc}$ (at 5 dBm, typical) |

## Test port input

Table 1-10 Test port input levels

| Description | Specification | Supplemental information |
| :--- | :--- | :--- |
| Maximum test port input level |  |  |
| 300 kHz to 3 GHz | +10 dBm |  |
| 3 GHz to 4.25 GHz | +9 dBm |  |
| 3 GHz to 6 GHz | +7 dBm |  |
| 6 GHz to 8.5 GHz | +5 dBm |  |
| Damage level |  |  |
| 300 kHz to 8.5 GHz |  |  |
|  |  |  |
| Crosstalk ${ }^{1}$ |  |  |
| 3 MHz to 3 GHz | -120 dBCD (source attenuator $=0 \mathrm{~dB}$ (source attenuator $=5 \mathrm{~dB}$ or more, typical) |  |
| 3 GHz to 6 GHz | -109 dB |  |
| 6 GHz to 7.5 GHz | -99 dB |  |
| 7.5 GHz to 8.5 GHz | -89 dB |  |

Table 1-11 Test port input (trace noise ${ }^{2}$ )

| Description | Specification | Supplemental information |
| :---: | :---: | :---: |
| Trace noise magnitude |  |  |
| 300 kHz to 3 MHz <br> (source power level $=+10 \mathrm{dBm}$ ) |  | 5 mdB rms (typical) <br> 8 mdB rms (high temperature mode: ON, typical) |
| 3 MHz to 3 GHz <br> (source power level $=+10 \mathrm{dBm}$ ) | 1 mdB rms $\left(23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}\right)$ | 4 mdB rms (high temperature mode: ON, typical) |
| 3 GHz to 4.25 GHz <br> (source power level $=+9 \mathrm{dBm}$ ) | 1.2 mdB rms $\left(23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}\right)$ | 4.8 mdB rms (high temperature mode: ON, typical) |
| 4.25 GHz to 6 GHz <br> (source power level $=+7 \mathrm{dBm}$ ) | $3.6 \mathrm{mdB} \mathrm{rms}\left(23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}\right)$ | 7.2 mdB rms (high temperature mode: ON, typical) |
| 6 GHz to 7.5 GHz <br> (source power level $=+5 \mathrm{dBm}$ ) | 3.6 mdB rms $\left(23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}\right)$ | 7.2 mdB rms (high temperature mode: ON, typical) |
| 7.5 GHz to 8.5 GHz <br> (source power level $=+5 \mathrm{dBm}$ ) | $6 \mathrm{mdB} \mathrm{rms}\left(23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C}\right)$ | 9.6 mdB rms (high temperature mode: ON, typical) |

[^1]Table 1-12
Test port input (stability ${ }^{1}$ )

| Description | Specification | Supplemental information |
| :---: | :---: | :---: |
| Stability magnitude |  |  |
| 3 MHz to 3 GHz |  | $\begin{aligned} & 0.005 \mathrm{~dB} /{ }^{\circ} \mathrm{C} \\ & \text { (at } 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C} \text {, typical) } \end{aligned}$ |
| 3 GHz to 6 GHz |  | $\begin{aligned} & 0.01 \mathrm{~dB} /{ }^{\circ} \mathrm{C} \\ & \text { (at } 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C} \text {, typical) } \end{aligned}$ |
| 6 GHz to 8.5 GHz |  | $\begin{aligned} & 0.04 \mathrm{~dB} /{ }^{\circ} \mathrm{C} \\ & \text { (at } 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C} \text {, typical) } \end{aligned}$ |
| Stability phase |  |  |
| 3 MHz to 3 GHz |  | $\begin{aligned} & 0.1^{\circ}{ }^{\circ} \mathrm{C} \\ & \text { (at } 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C} \text {, typical) } \end{aligned}$ |
| 3 GHz to 6 GHz |  | $\begin{aligned} & 0.2^{\circ} /^{\circ} \mathrm{C} \\ & \text { (at } 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C} \text {, typical) } \end{aligned}$ |
| 6 GHz to 8.5 GHz |  | $\begin{aligned} & 0.8^{\circ} /{ }^{\circ} \mathrm{C} \\ & \text { (at } 23^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C} \text {, typical) } \end{aligned}$ |

Table 1-13
Test port input (dynamic accuracy)
Accuracy of the test port input power reading is relative to $\mathbf{- 1 0} \mathrm{dBm}$ reference input power level.

[^2]Table 1-14
Test port input (group delay ${ }^{1}$ )

| Description | Specification | Supplemental information |
| :--- | :--- | :--- |
| Aperture (selectable) | (frequency span)/(number of points -1$)$ |  |
| Maximum aperture | $25 \%$ of frequency span |  |
| Maximum delay |  | Limited to measuring no more than |
|  |  | See graph below, typical |

The following graph shows group delay accuracy with type-N full 2-port calibration and a 10 Hz IF bandwidth. Insertion loss is assumed to be $<2 \mathrm{~dB}$.

Group delay (typical)

In general, the following formula can be used to determine the accuracy, in seconds, of specific group delay measurement: $\pm$ phase accuracy $(\mathrm{deg}) /[360 \mathrm{x}$ aperture $(\mathrm{Hz})]$

[^3]
## General information

Table 1-15

| Table 1-15 | System bandwidths |
| :--- | :--- |
| Description | Supplemental information |
| IF bandwidth settings |  |
| Range | 10 Hz to 100 kHz |
|  | Nominal settings are: |
|  | $10,15,20,30,40,50,70,100,150,200,300,400,500,700$, |
|  | $1 \mathrm{k}, 1.5 \mathrm{k}, 2 \mathrm{k}, 3 \mathrm{k}, 4 \mathrm{k}, 5 \mathrm{k}, 7 \mathrm{k}, 10 \mathrm{k}, 15 \mathrm{k}, 20 \mathrm{k}, 30 \mathrm{k}, 40 \mathrm{k}, 50 \mathrm{k}, 70 \mathrm{k}, 100 \mathrm{kHz}$ |

Table 1-16
Front panel information

| Description | Supplemental information |
| :--- | :--- |
| RF connectors |  |
| Type | Type-N, female; $50 \Omega$, nominal |
| Display |  |
| Size | 10.4 in TFT color LCD |
| Resolution | VGA (640x480) |

| Table 1-17 | Rear panel information |
| :---: | :---: |
| Description | Supplemental information |
| External trigger connector |  |
| Type | BNC, female |
| Input level | LOW threshold voltage: 0.5 V HIGH threshold voltage: 2.1 V Input level range: 0 to +5 V |
| Pulse width | $\geq 2 \mu \mathrm{sec}$, typical |
| Polarity | Negative (downward) only |
| External reference signal input connector |  |
| Type | BNC, female |
| Input frequency | $10 \mathrm{MHz} \pm 10 \mathrm{ppm}$, typical |
| Input level | $0 \mathrm{dBm} \pm 3 \mathrm{~dB}$, typical |
| Internal reference signal output connector |  |
| Type | BNC, female |
| Output frequency | $10 \mathrm{MHz} \pm 10 \mathrm{ppm}$, typical |
| Signal type | Sine wave, typical |
| Output level | $0 \mathrm{dBm} \pm 3 \mathrm{~dB}$ into $50 \Omega$, typical |
| Output impedance | $50 \Omega$, nominal |
| VGA video output | 15-pin mini D-Sub; female; drives VGA compatible monitors |
| GPIB | 24-pin D-Sub (type D-24), female; compatible with IEEE-488 |
| Parallel port | 36-pin D-Sub (type 1284-C), female; provides connection to printers |
| USB-host port | Universal serial bus jack, type A configuration (4 contacts inline, contact 1 on left); female; provides connection to printer, ECal module, USB/GPIB interface or multiport test set |
| Contact 1 | Vcc: 4.75 to $5.25 \mathrm{VDC}, 500 \mathrm{~mA}$, maximum |
| Contact 2 | -Data |
| Contact 3 | +Data |
| Contact 4 | Ground |
| USB (USBTMC ${ }^{1}$ ) interface port | Universal serial bus jack, type B configuration (4 contacts inline, contact 1 on left); female; provides connection to an external PC |
| LAN | 10/100 BaseT Ethernet, 8-pin configuration; auto selects between the two data rates |
| Handler I/0 port | 36-pin D-sub, female; provides connection to handler system |
| Line power ${ }^{2}$ |  |
| Frequency | 47 Hz to 63 Hz |
| Voltage | 90 to 132 VAC, or 198 to 264 VAC (automatically switched) |
| VA max | 350 VA max. |

## Measurement capabilities

$\left.\begin{array}{ll}\text { Number of measurement channels } & \begin{array}{l}\text { Up to } 16 \text { independent measurement channels. A measurement channel is coupled } \\ \text { to stimulus response settings including frequency, IF bandwidth, power level, } \\ \text { and number of points. }\end{array} \\ \hline \text { Number of display windows } & \begin{array}{l}\text { Each measurement channel has a display window. Up to } 16 \text { display windows (channels) } \\ \\ \text { can be displayed. }\end{array} \\ \hline \text { Number of traces } & \text { Six display modes (selectable): } \\ & 16 \text { data traces and } 16 \text { memory traces per channel at 4-channel mode } \\ & 9 \text { data traces and } 9 \text { memory traces per channel at } 9 \text {-channel mode }\end{array}\right\}$

[^6]
## Source control

| Measured number of points per sweep | User definable from 2 to $20,001^{1}$. |
| :--- | :--- |
| Sweep mode | Standard stepped, standard swept, fast stepped and fast swept. |
| Sweep type | Linear sweep, segment sweep, log sweep and power sweep. |
| Segment sweep | Define independent sweep segments. Set number of points, test port power levels, <br> IF bandwidth, delay time, sweep time and sweep mode independently for each segment. |
| Sweep trigger | Set to continuous, hold, or single, sweep with internal, external, manual, <br> or bus trigger. |
| Trigger event | Set trigger event dependent on sweep or data point. |
| Power | Set source power from -50 dBm to10 dBm. The power slope function and the power <br> calibration function compensate source power level error. |
| Frequency-offset ${ }^{2}$ | Set source frequency independently from where the receivers are tuned. |

## Trace functions

| Display data | Display current measurement data, memory data, <br> or current measurement and memory data simultaneously. |
| :--- | :--- |
| Trace math | Vector addition, subtraction, multiplication or division of <br> measured complex values and memory data. |
| Title | Add custom title to each channel window. Titles are <br> printed on hardcopies of displayed measurements. |
| Autoscale | Automatically selects scale resolution and reference value to <br> vertically center the trace. |
| Electrical delay | Offset measured phase or group delay by a defined amount of <br> electrical delay, in seconds. |
| Phase offset | Offset measured phase or group delay by a defined amount in degrees. |
| Statistics | Calculates and displays mean, standard deviation and peak-to-peak <br> deviation of the data trace. |
| Frequency blank | Hide the frequency information to be displayed on the ENA screen. |

[^7]
## Data accuracy enhancement

| Measurement calibration | Measurement calibration significantly reduces measurement uncertainty due to errors caused by system directivity, source and load match, tracking and crosstalk. Full 2-port, 3-port, or 4-port calibration removes all the systematic errors for the related test ports to obtain the most accurate measurements. |
| :---: | :---: |
| Calibration types available |  |
| Response | Simultaneous magnitude and phase correction of frequency response errors for either reflection or transmission measurements. |
| Response and isolation | Compensates for frequency response and crosstalk errors of transmission measurements. |
| Enhanced response | Compensates for frequency response and source-match errors |
| One-port calibration | Available on test set port 1, port 2, port 3, or port 4 to correct for directivity, frequency response and source match errors. |
| Full 2-port/3-port/4-port calibration TRL/LRM calibration | Compensation for directivity, reflection, transmission frequency response and crosstalk in both forward and reverse directions. Provides the highest accuracy for accuracy for coaxial and non-coaxial environments, such as on-probing, in-fixture or waveguide measurements. |
| Interpolated error correction | With any type of accuracy enhancement applied, interpolated mode recalculates the error coefficients when the test frequencies are changed. The number of points can be increased or decreased and the start/stop frequencies can be changed. |
| Velocity factor | Enter the velocity factor to calculate the equivalent physical length. |
| Reference port extension | Redefine the measurement plane from the plane where the calibration was done. |
| Automatic port extension | Compensates for both electrical length and insertion loss by measuring open and/or short standard. Provides a simplified approach for fixture compensation. |
| Accessible calibration coefficients | Calibration coefficients can be easily read and written ${ }^{1}$ with programming commands. |
| Mixer calibration ${ }^{1}$ |  |
| Scalar-mixer calibration | Scalar-mixer calibration corrects the conversion loss for input port source match and output port load match. Scalar-mixer calibration also corrects the input match measurements for input port directivity, frequency response, and source match at the input frequencies and corrects the output match measurements for output port directivity, frequency response, and source match at output frequencies. This calibration offers the conversion loss/gain measurements with correcting the mismatches of both input and output test ports. |
| Vector-mixer calibration | Vector-mixer calibration corrects for directivity, source match, load match, and reflection frequency response at each test port by using a characterized calibration mixer with de-embedding function. This calibration provides the measurements of phase and absolute group delay. The characterization of the calibration mixer is part of the calibration process. |

## Storage

| Removable hard disk drive | Store and recall instrument states, calibration data, and trace data <br> on 3 GB , minimum, removable hard drive. Trace data can be saved in CSV <br> (comma separated value) format. All files are MS-DOS ${ }^{\circledR}$-compatible. <br> Instrument states include all control settings, limit lines, segment sweep <br> tables, and memory trace data. |
| :--- | :--- |
| File sharing | Internal hard disk drive (D:) can be accessed from an external <br>  <br> Windows ${ }^{\circledR}$ PC through LAN. |
| Disk drive | Instrument states, calibration data, and trace data can be stored on <br> an internal 3.5 inch 1.4 MB floppy disk in MS-DOS ${ }^{\circledR}$-compatible format. |
| Screen hardcopy | Printouts of instrument data are directly produced on a printer. The analyzer <br> provides USB and parallel interfaces. |

## System capabilities

| Familiar graphical user interface | The ENA Series analyzer employs a graphical user interface based on <br> Windows ${ }^{\text {® }}$ operating system. There are thre ways to operate the instrument <br> manually: you can use a hardkey interface, touch screen interface (option <br> E5070B/E5071B-016) or a mouse interface. |
| :--- | :--- |
| Limit lines | Define the test limit lines that appear on the display for pass/fail testing. <br> Defined limits may be any combination of horizontal/sloping lines and discrete <br> data points. The offset limit line function adjusts offset values to the frequency <br> and output level. |
| Limit test | Defines the stop and start frequency and the maximum allowable ripple value of <br> each frequency band. Ripple limit test may set up as many as 12 frequency bands <br> for testing ripple. The frequency bands are combined in a list that is displayed <br> while the ripple frequency bands are being edited. |
| Ripple limit test | Defines the amplitude below the peak and the minimum and maximum allowable <br> bandwidths. |
| Bandwidth limit test | Access to the ENA from any JavaTM-enable Web browser via LAN interface. ENA <br> can be controlled from a remote location without using special software. |
| Fixture simulator | Convert data from single-ended measurement to balanced measurement <br> parameters (mixed-mode S-parameters), balanced parameters or CMRR by <br> using internal software. |
| Balance-unbalance conversion | De-embed an arbitrary circuit defined by a two-port Touchstone data file <br> (50 $\Omega$ system) for each test port. This function eliminates error factors <br> between calibration plane and DUT and expands the calibration plane for each <br> test port. This function can be used with the port extension function. |
| Network de-embedding | Convert S-parameters measured in 50 $\Omega$ reference impedance to data <br> in other reference impedance levels by using internal software. This conversion <br> can be performed for both single-ended (unbalance) measurement ports and <br> converted balanced measurement ports. |
| Port reference impedance conversion | Add one of predefined matching circuits or a circuit defined by a two-port <br> Touchstone data file to each single-ended test port or converted balanced <br> (differential) test port by using internal software. |

## Automation

|  | GPIB | Internal |
| :---: | :---: | :---: |
| SCPI | X | X |
| COM |  | X |

| Methods | Applications can be developed in a built-in VBA® (Visual Basic for Applications) <br> language. Applications can be executed from within the analyzer via COM <br> (component object model) or using SCPI. |
| :--- | :--- |
| Internal analyzer execution | The GPIB interface operates to IEEE 488.2 and SCPI protocols. <br> The analyzer can be controlled by a GPIB external controller. The analyzer can <br> control external devices using a USB/GPIB interface. |
| Controlling via GPIB | The USB interface operates to USBTMC and SCPI protocols. <br> The analyzer can be controlled by an external PC using the USB interface with a <br> USB cable. |
| Controlling via USB (USBTMC) |  |
| LAN | 10 BaseT or 100 BaseTX (automatically switched), Ethertwist, <br> Standard conformity |
| RJ45 connector |  |

## E5091A multiport test set

The section provides test set input/output performance without calibration by the E5070B/E5071B.

Table 2-1
Test set input/output performance

| Description | Specification | Supplemental information |
| :--- | :--- | :--- |
| Range | 50 MHz to 8.5 GHz |  |
| Damage level |  | $20 \mathrm{dBm}, \pm 25 \mathrm{VDC}$ (typical) |

Table 2-2 Option E5091A-009 port performance

| Description | Specification |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

## Table 3-3

Control line

| Description | Specification | Typical |
| :--- | :--- | :--- |
| Number of groups | 4 |  |
|  | Group A: 8 bits |  |
|  | Group B, C, D: 4 bits |  |
| Input voltage range ${ }^{1}$ | 0 V to +5 V (positive input) |  |
| Maximum current | -5 V to 0 V (negative input) |  |
|  | Group A, B: 50 mA in total of each group |  |
| Impedance | Group C, D: $500 \mu \mathrm{~A}$ in total of each group | Group A, B: $<10$ ohm |
|  |  | Group C, D: $<200$ ohm |

Table 3-4
DC source

| Description | Specification | Typical |
| :--- | :--- | :--- |
| Number of sources | 4 |  |
| Output voltage range |  | 0 V to +5.2 V (nominal) ${ }^{2}$ |
| Output voltage accuracy | $\pm 3 \%$ of setting ( +1 V to +5 V ) at |  |
| Voltage resolution | 1 M ohm load impedance |  |
| Maximum current |  | 150 mA for each source (nominal) |
| Output impedance |  | $<5$ ohm |

Table 3-5
Operating storage environment

| Description | General characteristics |
| :--- | :--- |
| Temperature | $+5^{\circ} \mathrm{C}$ to $+40^{\circ} \mathrm{C}$ |
| Humidity | 20 to $80 \%$ at wet bulb temperature $<+29^{\circ} \mathrm{C}$ (non-condensing) |
| Altitude | 0 to $2,000 \mathrm{~m}(0$ to 6,561 feet) |
| Vibration | $0.21 \mathrm{G} \mathrm{max.,5} \mathrm{to} 500 \mathrm{~Hz}$ |

Table 3-6
Non-operating storage environment

| Description | General characteristics |
| :--- | :--- |
| Temperature | $-10^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}$ |
| Humidity | 20 to $90 \%$ at wet bulb temperature $<+40^{\circ} \mathrm{C}$ (non-condensing) |
| Altitude | 0 to $4,572 \mathrm{~m}(0$ to 15,000 feet) |
| Vibration | $0.5 \mathrm{G} \mathrm{max.,5} \mathrm{~Hz}$ to 500 Hz |

[^10]Table 3-7

## Front panel information

| Description | General characteristics |
| :--- | :--- |
| RF connectors | SMA |
| Test ports | 38 ports |
| Control line | 15 -pin D-sub, female |
|  | 25 -pin D-sub, female |

Table 3-8 Rear panel information

| Description | General characteristics |
| :--- | :--- |
| USB port | Type B-receptacle, provide connection to the E5071C |
| Line power ${ }^{1}$ | 47 to 63 Hz |
| Frequency | 90 to 132 VAC, or 198 to 264 VAC |
| Voltage | (automatically switched) 300 VA max. |
| VA max |  |

Table 3-9
Test set dimensions and block diagram

| Description | General characteristics |
| :--- | :--- |
| Dimensions | See Figures 3-1, 3-2, 3-3 and 3-4 |

## Agilent Direct

www.agilent.com/find/agilentdirect Quickly choose and use your test equipment solutions with confidence.

Agilent
Open

## www.agilent.com/find/open

Agilent Open simplifies the process of connecting and programming test systems to help engineers design, validate and manufacture electronic products. Agilent offers open connectivity for a broad range of system-ready instruments, open industry software, PC-standard I/O and global support, which are combined to more easily integrate test system development.

Microsoft and Windows are U.S. registered trademarks of Microsoft Corporation.

## Remove all doubt

Our repair and calibration services will get your equipment back to you, performing like new, when promised. You will get full value out of your Agilent equipment throughout its lifetime. Your equipment will be serviced by Agilent-trained technicians using the latest factory calibration procedures, automated repair diagnostics and genuine parts. You will always have the utmost confidence in your measurements. For information regarding self maintenance of this product, please contact your Agilent office.

Agilent offers a wide range of additional expert test and measurement services for your equipment, including initial start-up assistance, onsite education and training, as well as design, system integration, and project management.

For more information on repair and calibration services, go to:

[^0]:    ${ }^{1}$ The test port dynamic range is calculated as the difference between the test port rms noise floor and the source maximum output power. The effective dynamic range must take measurement uncertainty and interfering signals into account.
    ${ }^{2}$ May be limited to 90 dB at particular frequencies below 350 MHz or above 4.25 GHz due to spurious receiver residuals.

[^1]:    ${ }^{1}$ Response calibration not omitted.
    ${ }^{2}$ Trace noise is defined as a ratio measurement of a through, at IF bandwidth $=3 \mathrm{kHz}$.

[^2]:    ${ }^{1}$ Stability is defined as a ratio measurement at the test port.

[^3]:    ${ }^{1}$ Group delay is computed by measuring the phase change within a specified step (determined by the frequency span and the number of points per sweep).

[^4]:    ${ }^{1}$ Typical performance.
    ${ }^{2}$ Fast swept mode. System error correction OFF. Analyzer display turned off with : DISP:ENAB OFF. Number of traces $=1$.
    ${ }^{3}$ Fast swept mode. System error correction ON. Analyzer display turned off with :DISP:ENAB OFF. Number of traces $=1$.
    ${ }^{4}$ Standard stepped mode. System error correction ON. Analyzer display turned off with :DISP:ENAB OFF. Number of traces $=1$.

[^5]:    ${ }^{1}$ Typical performance.
    ${ }^{2}$ Start 1 GHz , stop $1.2 \mathrm{GHz}, 100 \mathrm{kHz}$ IF bandwidth, Error correction OFF, display update: OFF, number of traces $=1$.
    ${ }^{3}$ Measured using a VEE 6.0 program running on a 733 MHz Pentium III HP Kayak, Transferred complex $\mathrm{S}_{11}$ data, using :CALC:DATA?SDATA.
    ${ }^{4}$ Measured using a VEE 7.0 program running on a 500 MHz Pentium III DELL OptiPlex, transferred complex $\mathrm{S}_{11}$ data.
    ${ }^{5}$ Measured using an E5070B/E5071B VBA macro running inside the analyzer. Transferred complex $\mathrm{S}_{11}$ data.

[^6]:    ${ }^{1}$ Option E5070B-010 or E5071B-010 is required.

[^7]:    ${ }^{1} 20,001$ points measurement is available only for 4 data traces and 4 memory traces per channel in 1 - channel mode
    ${ }^{2}$ Option E5070B-008 or E5071B-008 is required.

[^8]:    ${ }^{1}$ SPDT: Single-pole-double-throw switches. Applies to SW5, SW6, SW7, SW8, SW9 and SW10 in the E5092A. (See Figure 3-5.)
    ${ }^{2}$ SP4T: Single-pole-four-throw switches. Applies to SW1, SW2, SW3 and SW4 in the E5092A. (See Figure 3-5.)

[^9]:    ${ }^{1}$ SPDT: Single-pole-double-throw switches. Applies to SW5, SW6, SW7, SW8, SW9 and SW10 in the E5092A. (See Figure 3-5.)
    ${ }^{2}$ SP4T: Single-pole-four-throw switches. Applies to SW1, SW2, SW3 and SW4 in the E5092A. (See Figure 3-5.)
    ${ }^{3}$ This specification is defined when all ports are terminated with a 50 ohm load.

[^10]:    ${ }^{1}$ Input voltage will be clipped at about $\pm 5.2 \mathrm{~V}$ when over this range.
    2 The output voltage can be set in this range.
    ${ }^{3}$ The output voltage resolution becomes effective between 0 V to 5.2 V .

[^11]:    ${ }^{1} 1 \mathrm{~A}$ third-wire ground is required.
