Economical, indispensable tools for a variety of uses in engineering, design, troubleshooting, or service.

## Best Substituter Value Available

- Direct reading - No fumbling with multiple slide or rotary switches
The IET family of digital substituters uses convenient side by side thumbwheel switches. Simply dial in the desired values and use.
- Accurate

In addition to standard 1\% economical units, tolerances of $0.1 \%, 0.05 \%, 0.01 \%$, and others are available.

- Broad choice of standard and optional models with many powerful features
A full line of standard substituters will satisfy most requirements. Other IET families of precision products include:
- Laboratory standards
- Transfer standards
- Programmable control
- RTD simulation
- High power
- Very high resistance
- Error proof

Since the impedance values are set and read directly, no mistakes can be made as with rotary or slide switch decade boxes. No need to examine and sum groups of switches - simply read one number.

- Color coded

Different colored switches separate the various impedance ranges.

- Compact, convenient, and rugged

Made of high impact plastic, these substituters are very portable and reduce clutter on a busy lab bench.

## OPTIONS

- Shielded case with grounding post
- Panel mounting
- Low residual impedance switch
- Protection fuse
- Programmable control (See p. 23)

The RC-box, shown on the right, combines the features and specifications of both the R-box and the C-box in one convenient package. Ideal for setting timers, oscillators, and filters, the resistance and capacitance may be used independently, in series, or in parallel. A shorting link allows them to be coupled or separated.

* Accuracy after subtraction of the Residual Impedance; traceable to NIST.
LS-400 and LS-400A Test Conditions: 1 kHz; 1 Vrms; series model; $23^{\circ} \mathrm{C}$.
** Higher power resistance substituters (1 W or higher) available; see optional models below or HPRS data sheet.
$\dagger$ Residual Impedance may be reduced to $0.04 \Omega$ or 5 pF for lowest decade with LR Option. This makes for more effective usage at low impedances. Lowest decade is isolated from others with a switch when desired.

Additional information for Inductance Substituters

| Inductance | Frequency Range | Max. Q | Rating |
| :---: | :---: | :---: | :---: |
| $0.1-0.9 \mathrm{mH}$ | $300 \mathrm{~Hz}-2 \mathrm{MHz}$ | $100 @ 800 \mathrm{kHz}$ | 700 mA |
| $1-9 \mathrm{mH}$ | $300 \mathrm{~Hz}-1 \mathrm{MHz}$ | $80 @ 40 \mathrm{kHz}$ | 500 mA |
| $10-90 \mathrm{mH}$ | $300 \mathrm{~Hz}-800 \mathrm{kHz}$ | $80 @ 40 \mathrm{kHz}$ | 300 mA |
| $0.1-0.9 \mathrm{H}$ | $300 \mathrm{~Hz}-200 \mathrm{kHz}$ | $40 @ 20 \mathrm{kHz}$ | 100 mA |
| $1-9 \mathrm{H}$ | $200 \mathrm{~Hz}-20 \mathrm{kHz}$ | $30 @ 8 \mathrm{kHz}$ | 20 mA |
| $10-90 \mathrm{H}$ | $200 \mathrm{~Hz}-6 \mathrm{kHz}$ | $60 @ 2 \mathrm{kHz}$ | 4 mA |

## OPTIONAL MODELS

In order to satisfy any requirements for decade substituters, construct a part number from the table below, or consult

IET Labs.

* See HARS and HACS Series for standards grade resistance and capacitance substituters.

## OPTIONS

-CC-25 Dual Lead Clip - plugs into dual binding posts for convenient lead connections
-LR Residual Impedance is reduced to $0.04 \Omega$ or 5 pF on lowest decade
-SC $\quad$ Shielded case with grounding terminal
-PM Panel mounting version
-FP Unit supplied with series 2 A fuse for added protection (User may substitute other fuses; residual impedance will increase by $0.06 \Omega$ for 2 A fuses)
-LP Unit supplied with low profile binding post
OTHER VERSIONS
Programmable Version High Power Version High Accuracy Version High Resistance Version
