

Source Module Specifications

Specifications apply to the end of a 2 m long fiber cable (as specified under fiber type) with Diamond HMS-10 connectors attached. All specifications are valid for an attenuation setting of 0.0 dB.

[1] Central wavelength is shown on the display.

[2] rms: root mean square, FWHM: Full Width Half Maximum.

[3] Class 3A according to IEC 825-1 (1993), Class 1 according to FDA CFR 21 (1986).

[4] Class 1 according to IEC 825-1 (1993) and FDR CFR 21 (1986).

[5] After a warm-up time of 60 min. with output enabled. If previously stored at the same temperature, 20 min. only.

Analog output:

Bandwidth: ≥ DC, ≤ 300 to 1000 Hz, depending on range and optical head.

Internal digital modulation mode:
270 Hz, 1 kHz, selectable. All output signals are pulse-shaped. Duty cycle 50%.

Output voltage: 0–2 V into open.

Output attenuation:

The output power of all source modules can be attenuated from 0 dB to 6 dB (4 dB for Agilent 81551MM) in steps of 0.1 dB.

Max. input voltage: ± 10 V.

Stability:

The value for the long term CW stability will increase by a factor of two with just one minute of warm-up time (laser enabled).
