

Keysight E8663D

PSG RF Analog Signal Generator

Data Sheet

Introduction

The Keysight Technologies, Inc. E8663D PSG is a fully synthesized signal generator with high output power, low phase noise, and optional ramp sweep capability.

Specifications apply over a 0 to 55 °C range, unless otherwise stated, and apply after a 45 minute warm-up time. Supplemental characteristics, denoted as typical, nominal, or measured, provide additional (non-warranted) information at 25 °C, which may be useful in the application of the product.

Unless otherwise noted, this data sheet applies to units with serial numbers ending with 50420000 or greater.

Definitions

Specifications (spec): Represents warranted performance for instruments with a current calibration.

Typical (typ): Represents characteristic performance which is non-warranted.
Describes performance that will be met by a minimum of 80% of all products.

Nominal (nom): Represents characteristic performance which is non-warranted. Represents the value of a parameter that is most likely to occur; the expected mean or mode of all instruments at room temperature (approximately 25 °C).

Measured: Represents characteristic performance which is non-warranted. Represents the value of a parameter measured on an instrument during design verification.

1. Performance is unspecified below 250 kHz.
2. In ramp sweep mode (Option 007), resolution is limited with narrow spans and slow sweep speeds. Refer to ramp sweep specifications for more information.
3. Time from GPIB trigger to frequency within 0.1 ppm of final frequency above 250 MHz or within 100 Hz below 250 MHz. CW switching speed to within 0.05% of final frequency is ≥ 5 ms (nom).
4. Add 12 ms (typ) when switching from greater than 3.2 GHz to less than 3.2 GHz (Option 509 only).
5. With Option 1EH low band harmonic filters off. With the 1EH filters turned on, add 4 ms.
6. Option HY2 switching speed is 30 ms (nom) for 250 kHz to 3.2 GHz and 40ms (nom) for > 3.2 GHz.
7. N is a factor used to help define certain specifications within the document.
8. Not verified by Keysight N7800A TME Calibration and Adjustment Software. Daily aging rate may be verified as a supplementary chargeable service, on request.
9. To optimize phase noise use 5 dBm ± 2 dB.

Display	Z-axis intensity or RF amplitude pulse		
Functions	M1 to center, M1/M2 to start/stop, marker delta		
Two-tone (master/slave) measurements ⁵	Two PSGs can synchronously track each other, with independent control of start/stop frequencies		
Network analyzer compatibility	Compatible with Keysight 8757D scalar network analyzer. Also useable with Keysight 8757A/C/E scalar network analyzers for making basic swept measurements. ⁶		

1. 19 ms (typ) when stepping from greater than 3.2 GHz to less than 3.2 GHz (Option 509 only). Option HY2 switching speed is 30 ms (nom) for 250 kHz to 3.2 GHz and 40 ms (nom) for > 3.2 GHz.
2. During ramp sweep operation, AM, FM, phase modulation, and pulse modulation are useable but performance is not guaranteed.
3. Minimum settable sweep span is proportional to carrier frequency and sweep time. Actual sweep span may be slightly different than desired setting for spans less than $[0.00004\% \text{ of carrier frequency or } 140 \text{ Hz}] \times [\text{sweep time in seconds}]$. Actual span will always be displayed correctly.
4. Typical accuracy for sweep times > 100 ms can be calculated from the equation: $[(0.005\% \text{ of span})/(\text{sweep time in seconds})] \pm \text{timebase}$. Accuracy is not specified for sweep times < 100 ms.
5. For master/slave operation, use Keysight part number 8120-8806 master/slave interface cable.
6. GPIB system interface is not supported with 8757A/C/E, only with 8757D. As a result, some features of 8757A/C/E, such as frequency display, pass-through mode, and alternate sweep, do not function with PSG signal generators.

Maximum output power (measured)

- Maximum power specifications are warranted from 15 to 35 °C, and are typical from 0 to 15 °C. Maximum power over the 35 to 55 °C range typically degrades less than 2 dB.
- With Option 1EH low-pass filters below 2 GHz switched off, unless otherwise specified.
- Option HY2 requires ordering Option 1E1 +1EH + 1EU. Maximum power specifications are warranted from 15 to 35 °C and are typical from 0 to 15 °C.
Maximum operating temperature of Option HY2 is 35 °C.
- In this mode, harmonics are large and output power refers to the total power including harmonics.
- With Option 1EH low-pass filters below 2 GHz switched off. With filters on, this specification applies above 2 GHz.
- With Option HY2 operating in SNR mode.

Step attenuator (Option 1E1) ¹

Range	0 dB and 5 dB to 115 dB in 10 dB steps
With optimize S/N on ²	0 dB to 115 dB in 5 dB steps
Attenuator hold range minimum	From -20 dBm to maximum specified output power with step attenuator in 0 dB position; can be offset using Option 1E1 attenuator.

> 2 GHz to 9 GHz	± 1.0	± 0.8	± 0.8	± 0.8	± 0.8	± 0.9	± 1.0

Level accuracy (measured)

1. The step attenuator provides coarse power attenuation to achieve low power levels. Fine power level adjustment is provided by the Automatic Level Control (ALC) within the attenuator hold range.
2. With attenuator in auto mode. Optimize S/N mode provides improved signal/noise performance and is included with Option 1EU models. Specs in the following sections (such as level accuracy, spectral purity, modulation, etc.) are only tested with Optimize S/N mode turned off.
3. To within 0.1 dB of final amplitude within one attenuator range.
4. To within 0.5 dB of final amplitude within one attenuator range. Add up to 50 ms when using Power Search.
5. Specifications apply in CW and list/step sweep modes over the 15 to 35 °C temperature range with the ALC on. Degradation outside this range, for power levels > -10 dBm, is typically < 0.3 dB. In ramp sweep mode (with Option 007), specifications are typical. Specifications do not apply above the maximum specified power.
6. When Option UNX or UNY low phase noise mode is on, specifications below 250 MHz apply only when Option 1EH low-pass filters below 2 GHz are on. With Option 1EH low-pass filters below 2 GHz off, accuracy is typically ± 2 dB.
7. Specifications apply in CW and list/step sweep modes over the 15 to 35 °C temperature range, with attenuator hold off (normal operating mode). Degradation outside this range, for ALC power levels > -10 dBm, is typically < 0.3 dB. In ramp sweep mode (with Option 007), specifications are typical. Specifications do not apply above the maximum specified power.

- Specifications are typical for harmonics beyond specified frequency range. Specifications are with Option 1EH low-pass filters below 2 GHz off and Option UNX or UNY low phase noise mode off unless noted.
- Below 250 MHz in ramp sweep mode (Option 007), Option 1EH filters are always off. Refer to harmonic specification with filters off.
- 45 dBc below 60 MHz.
- Sub-harmonics are defined as carrier freq*(x/y), where x and y are integers, and x is not an integer multiple of y. Specifications are typical for sub-harmonics beyond specified frequency range.
- Specifications apply for CW mode, without modulation. In ramp sweep mode (Option 007), performance is typical for offsets > 1 MHz.
- Excluding external mechanical vibration.
- For offsets > 10 kHz.
- Option UNX or UNY low phase noise mode.

Paths	AM1 and AM2 are summed internally for composite modulation. Either path may be switched to any one of the modulation sources: Ext1, Ext2, Internal1, Internal2.		

1. All AM specifications are typical. For carrier frequencies below 2 MHz, AM is useable but not specified. Unless otherwise stated, specifications apply with ALC on, deep AM off, and envelope peaks within ALC operating range (–20 dBm to maximum specified power, excluding step-attenuator setting). With Option UNX or UNY low phase noise mode on, AM is useable but not recommended or specified below 250 MHz.
2. ALC off is used for narrow pulse modulation and/or high AM depths, with envelope peaks below ALC operating range (40 dB). Carrier power level will be accurate after a power search is executed.
3. ALC on with deep AM provides high AM depths together with closed-loop internal leveling. This mode must be used with a repetitive AM waveform (frequency > 10 Hz) with peaks > –5 dBm (nominal, excluding step-attenuator setting).
4. Modulation depths greater than 40 dB require an external input greater than ± 1 volt, and are not available with the internal modulation source.
5. If 600 Ω input impedance is selected, maximum input voltage is ± 6 V.
6. Option 1SM scan modulation provides exponential (log) AM with improved accuracy. In this mode, maximum output power is reduced up to 3 dB below 3.2 GHz.

1. With ALC off, specs apply after the execution of power search. Specifications apply with Atten Hold Off (default mode for instruments with attenuator), or ALC level between -5 and +10 dBm or maximum specified power, whichever is lower. Below 50 MHz, pulse modulation is useable; however performance is not warranted. Pulse modulation does not operate if Option UNX or UNY low phase noise mode is on.
2. Power search is a calibration routine that improves level accuracy with ALC off. The instrument microprocessor momentarily closes the ALC loop to find the modulator drive setting necessary to make the quiescent RF level equal to an entered value, then opens the ALC loop while maintaining that modulator drive setting. When executing power search, RF power will be present for typically 10 to 50 ms; the step attenuator (Option 1E1) can be set to automatically switch to maximum attenuation to protect sensitive devices. Power search can be configured to operate either automatically or manually at the carrier frequency, or over a user-definable frequency range. Power search may not operate above the maximum specified output power.
3. With Option 1E1 step attenuator in 0 dB position. Above 3.2 GHz, video feed-through decreases with step attenuator setting. Below 3.2 GHz, video feed-through is expressed as a percentage of RF output level.

Simultaneous modulation

All modulation types (FM, AM, Φ M, and pulse modulation) may be simultaneously enabled except: FM with Φ M, and linear AM with exponential AM. AM, FM, and Φ M can sum simultaneous inputs from any two sources (Ext1, Ext2, internal1, or internal2). Any given source (Ext1, Ext2, internal1, or internal2) may be routed to only one activated modulation type.

Remote programming

Interfaces	GPIO (IEEE-488.2,1987) with listen and talk, RS-232, and 10BaseT LAN interface.
Control languages	SCPI version 1997.0. Completely code compatible with previous PSG signal generator model, E8663B. The E8663D will emulate the applicable commands for the following signal generators, providing general compatibility with ATE systems and the E5500 phase noise system: Keysight 8662A/8663A Keysight 8643A/8644B Keysight 8664A/8665B Aeroflex 2040 Series
IEEE-488 functions	SH1, AH1, T6, TE0, L4, LE0, SR1, RL1, PPO, DC1, DTO, CO, E2.
Keysight IO libraries	Keysight's IO Library Suite ships with the E8663D to help you quickly establish an error-free connection between your PC and instruments – regardless of the vendor. It provides robust instrument control and works with the software development environment you choose.

General specifications

Power requirements	100/120 VAC 50/60/400 Hz; or 220/240 VAC 50/60 Hz, (automatically selected); < 250 W typ, 450 W maximum
Operating temperature range ¹	0 to 55 °C
Storage temperature range ²	–40 to 70 °C
Altitude	0 to 4600 m (15,000 ft.)
Humidity	Relative humidity - type tested at 95%, +40 °C (non-condensing)
Environmental testing	Samples of this product have been tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include but are not limited to temperature, humidity, shock, vibration, altitude, and power line conditions. Test methods are aligned with IEC 60068-2 and levels are similar to MIL-PRF-28800F Class 3. ³
ISO compliant	This family of signal generators is manufactured in an ISO-9001 registered facility in concurrence with Keysight's commitment to quality
EMC	Conforms to the immunity and emission requirements of IEC/EN 61326-1, including the conducted and radiated emission requirements of CISPR Pub 11/2003 Group 1 class A.
Acoustic noise	Normal: 51 dBA (nom) Worst case: 62 dBA (nom) ⁴
Storage	Memory is shared by instrument states and sweep list files. There is 14 MB of flash memory available in the E8663D. Depending on how the memory is used, a maximum of 1000 instrument states can be saved
Security	Display blanking Memory clearing functions (See Application Note, " Security Features of Keysight Technologies Signal Generators ," Part Number E4400-90621) With Option 008, all user-written files are stored on an 8 GByte removable flash memory card
Compatibility	Keysight 83550 Series millimeter heads OML millimeter source modules Keysight 8757D scalar network analyzers Keysight EPM/EPM-P Series power meters
Self-test	Internal diagnostic routine tests most modules (including microcircuits) in a preset condition; for each module, if its node voltages are within acceptable limits, then the module "passes" the test
Weight	< 22 kg (48 lb.) net, < 30 kg (68 lb.) shipping
Dimensions	178 mm H x 426 mm W x 515 mm D (7" H x 16.8" W x 20.3" D)
Recommended calibration cycle	24 months

1. Maximum operating temperature of Option HY2 is 35 °C.

2. During storage below –20 °C, instrument states may be lost.

3. As is the case with all signal generation equipment, phase noise specifications are not warranted in a vibrating environment.

4. This is louder than typical Keysight equipment: 60 dBA (nom).

External input 1	Drives either AM, FM, or Φ M. Nominal input impedance 50 or 600 Ω , damage levels are 5 V_{rms} and 10 V_{peak}
External input 2	Drives either AM, FM, or Φ M. Nominal input impedance 50 or 600 Ω , damage levels are 5 V_{rms} and 10 V_{peak}
Pulse/trigger gate input	Accepts input signal for external fast pulse modulation; also accepts external trigger pulse input for internal pulse modulation. Nominal impedance 50 Ω ; damage levels are 5 V_{rms} and 10 V_{peak}
Pulse video out	Outputs a signal that follows the RF output in all pulse modes; TTL-level compatible, nominal source impedance 50 Ω
Pulse sync out	Outputs a synchronizing pulse, nominally 50 ns width, during internal and triggered pulse modulation. TTL-level compatible, nominal source impedance 50 Ω
Rear panel connectors (all connectors are BNC female unless otherwise noted) ¹	
Auxiliary interface (dual mode)	Used for RS-232 serial communication and for master/slave source synchronization (9-pin subminiature female connector). For master/slave operation, use Keysight part number 8120-8806 master/slave interface cable
GPIO	Allows communication with compatible devices
LAN	Allows 10BaseT LAN communication
10 MHz input	Accepts a 10 MHz external reference (timebase) input. Nominal input impedance 50 Ω Damage levels > +10 dBm
10 MHz output	Outputs internal or external reference signal. Nominal output impedance 50 Ω . Nominal output power +8 dBm
Sweep output (dual mode)	Supplies a voltage proportional to the RF power or frequency sweep ranging from 0 volts at the start of sweep to +10 volts (nom) at the end of sweep, regardless of sweep width. During CW operation, supplies a voltage proportional to the output frequency, +10 volts (nom) corresponding to the maximum specified frequency. Output impedance: < 1 Ω (nom), can drive 2 k Ω .
Stop sweep in/out	Open-collector, TTL-compatible input/output. In ramp sweep operation, provides low level (nominally 0 V) during sweep retrace and bandcross intervals, and high level during the forward portion of the sweep. Sweep will stop when grounded externally, sweep will resume when allowed to go high
Trigger output (dual mode)	Outputs a TTL signal. High at start of dwell, or when waiting for point trigger; low when dwell is over or point trigger is received. When using LF Out, provides 2 μ s pulse at start of LF sweep.
Trigger input	Accepts 3.3V CMOS signal for triggering point-to-point in manual sweep mode, or to trigger start of LF sweep. Damage levels $\geq +10$ V or ≤ -4 V
Source module interface	Reserved for future use
Source settled	Provides an output trigger that indicates when the signal generator has settled to a new frequency or power level. High indicates source not settled, Low indicates source settled
Z-axis blank/markers	During ramp sweep, supplies +5 V (nom) level during retrace and bandswitch intervals. Supplies -5 V (nom) level when the RF frequency is at a marker frequency
10 MHz EFC (Option UNX or UNY)	Accepts an external DC voltage, ranging from -5 V to +5 V, for electronic frequency control (EFC) of the internal 10 MHz reference oscillator. This voltage inversely tunes the oscillator about its center frequency approximately -0.07 ppm/V. The nominal input impedance is greater than 1 M Ω
1 GHz Out (Option UNX or UNY)	Low noise 1 GHz reference output signal, approximately +5 dBm (nom)
Removable flash memory drive	Accepts 8 GB compact flash memory card for optional non-volatile memory (Option 008 only). All user information (save/recall settings, flatness files, presets, etc) is stored on removable memory card when Option 008 is installed

1. Digital inputs and outputs are 3.3 V CMOS unless indicated otherwise. Inputs will accept 5 V CMOS, 3 V CMOS, or TTL voltage levels.

Options, Accessories, and Related Products

Model/option	Description
E8663D-503	Frequency range from 100 kHz to 3.2 GHz
E8663D-509	Frequency range from 100 kHz to 9 GHz
E8663D-007	Analog ramp sweep
E8663D-008	8 GB removable flash memory
E8663D-063	E8663B backwards compatibility option bundle (1EU, 1E1, 1EH, UNX, UNT)
E8663D-UNX	Ultra low phase noise
E8663D-UNY	Enhanced ultra low phase noise
E8663D-UNT	AM, FM, phase modulation, and LF output
E8663D-UNW	Narrow pulse modulation
E8663D-1E1	Step attenuator
E8663D-1EH	Improved harmonics below 2 GHz (low-pass filters)
E8663D-1EM	Moves all front panel connectors to the rear panel
E8663D-1EU	High output power
E8663D-1SM	Scan modulation
E8663D-1CN	Front handle kit
E8663D-1CM	Rackmount flange kit
E8663D-1CP	Rackmount flange and front handle kit
E8663D-C09	Move all front panel connectors to the rear panel except for the RF output connector
E8663D-UK6	Commercial calibration certificate and test data
E8663D-A6J	ANSI Z540-1-1994 calibration
E8663D-AMG	Calibration + uncertainties + guardbanding (accredited)
E8663D-ABA	Printed copy of the English documentation set
Customized product solutions	
E8663D-H1S	1 GHz external frequency reference input and output
E8663D-HCC	Connections for phase coherency > 250 MHz
E8663D-HY2	Enhanced ultra low phase noise level 2
Accessories	
8120-8806	Master/slave interface cable
1819-0427	8 GByte compact flash memory card
E8251-60419	Rack slide kit
