Master the essentials

A great low-cost signal analyzer surpasses the basics and delivers crucial functionality. That's the strength of the CXA signal analyzer, the leading lowcost tool for essential signal characterization. Its capabilities provide a foundation for cost-effective testing and seamless integration with the other X-Series models. The CXA is also an excellent teaching tool for RF and microwave technologies and signal analysis. Get musthave capability with X-Series expandability in the CXA-and master the essentials.

Definitions and Conditions

Specifications describe the performance of parameters covered by the product warranty and apply to temperature ranges 5 to 50 °C 1, unless otherwise noted.

95th percentile values indicate the breadth of the population (approx. 2σ) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but are not covered by the product warranty.

The analyzer will meet its specifications when:

- It is within its calibration cycle
- Under auto couple control, except when Auto Sweep Time Rules = Accy
- The analyzer has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on; if it had previously been stored at a temperature range inside the allowed storage range, but outside the allowed operating range
- The analyzer has been turned on at least 30 minutes with Auto Align set to normal, or, if Auto Align is set to off or partial, alignments must have been run recently enough to prevent an Alert message; if the Alert condition is changed from Time and Temperature to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user

For ordering information, refer to the CXA Signal Analyzer Configuration Guide (5990-4341EN).

1. For earlier instruments (Serial number prefix < MY/SG/US5423), the full temperature ranges from 5 to 50 °C.

Output current	0.5 A nominal
Rear panel	
10 MHz out	
Connector	BNC female, 50Ω nominal
Output amplitude	≥ 0 dBm nominal
Frequency	10 MHz ± (10 MHz x frequency reference accuracy)
Ext Ref In	. 1 7
Connector	BNC female, 50Ω nominal
Input amplitude range	-5 to 10 dBm nominal
Input frequency	10 MHz ± nominal
Frequency lock range	± 5 x 10 ⁻⁶ of specified external reference input frequency
Trigger 1 input	
Connector	BNC female
Impedance	> 10 kΩ nominal
Trigger level range	-5 to 5 V
Trigger 1 output	
Connector	BNC female
Impedance	50Ω nominal
Level	5 V TTL nominal
Monitor output	
Connector	VGA compatible, 15-pin mini D-SUB
Format	XGA (60 Hz vertical sync rates, non-interlaced) Analog RGB
Resolution	1024 x 768
Noise source drive +28 V (pulsed)	
Connector	BNC female
SNS Series noise source	
Analog out	
Connector	BNC female
USB 2.0 ports	
Master (4 ports)	
Standard	Compatible with USB 2.0
Connector	USB Type-A female
Output current	0.5 A nominal
Slave (1 port)	
Standard	Compatible with USB 2.0
Connector	USB Type-B female
Output current	0.5 A nominal
GPIB interface	
Connector	IEEE-488 bus connector
GPIB codes	SH1, AH1, T6, SR1, RL1, PP0, DC1, C1, C2, C3, C28, DT1, L4, C0
GPIB mode	Controller or device

Inputs and Outputs (continued)

Rear panel (continued)	
LAN TCP/IP interface	
Standard	1000Base-T
Connector	RJ45 Ethertwist
Sync (reserved for future use)	
Connector	BNC female
IF output	
Connector	SMA female
Impedance	50Ω nominal
Wideband IF output, Option CR3 ¹	
Center frequency	
SA mode or I/Q analyzer	322.5 MHz
Conversion gain	-4 to +7 dB (nominal) plus RF frequency response
Bandwidth	
Low band	Up to 120 MHz (nominal)
High band	Up to 40 MHz (nominal)

^{1.} Not available on microwave CXA (Option 513 or 526).
