### **New Compact Broadband RF Amplifier Provides 500W Across Frequency Range of 6 to 600 MHz**

Bothell, WA, January 10, 2002, AR/Kalmus introduces a new addition to its family of high-power broadband RF amplifiers. The Model KAW4000 (formerly the 4500MC) amplifier is a compact unit that delivers minimum power output of 500W across the entire military frequency range of 6 to 600 MHz. Ideal for electronic warfare / electronic counter measures as well as general military communications.

The KAW4000 amplifier's compact design enables it to be used for both mobile and static installations. It is suitable for stack and rack systems and requires no tuning, band switching or adjustments to operate. Comprehensive documentation is available on the KAW4000, which is Commercial Off The Shelf (COTS) ready to use. As with all AR/Kalmus products, the system is backed by a worldwide repair/support network.

AR/Kalmus, a division of Amplifier Research, designs and manufactures broadband and narrowband RF power amplifiers for end-users and OEM's in a variety of applications in defense, communications and ISM markets worldwide.

For more information, contact AR/Kalmus, 11807 North Creek Parkway South, Suite 109, Bothell, Washington, USA, 98011, 425-485-9000; or visit AR/Kalmus on the web at [www.arkalmus.com](http://www.arkalmus.com).
