## TECHNICAL SPECIFICATIONS

## F2250 POWER SYSTEM SIMULATORS

## General Specifications

## Source Operation:

Accuracy specifications include all errors contributed by variations in power line voltage, load regulation, stability, and temperature, up to full output power. Stable source operation in four quadrants: load power factor from 1 to 0, leading or lagging. The F2250 Family is supplied with a Certificate of Calibration traceable to the National Institute of Standards and Technology.

## Source Power:

May be lower than the maximum rating at frequencies other than $50 / 60 \mathrm{~Hz}$ or DC.

## Electrostatic Discharge Immunity:

IEC 801-2: I.E.C. performance level 1 @
10 KV : normal performance within specifications. I.E.C. performance level 2 @ 20 KV : no permanent damage.

## Surge Withstand Capability:

ANSI/IEEE C37.90. The F2250 functions as a source during surge withstand capability tests, when the specified isolating circuit is interposed between the F2250 and the test relay.

## AC Amplitude Accuracy:

From $20^{\circ}$ to $30^{\circ} \mathrm{C}, \pm 0.4 \%$ of reading maximum at $50 / 60 \mathrm{~Hz}$ From $0^{\circ}$ to $50^{\circ} \mathrm{C}, \pm 0.5 \%$ of reading absolute maximum Typically $0.2 \%$ of reading.
Distortion:
Low distortion sine waves; total harmonic distortion: 0.2\% typical; 2\% maximum at $50 / 60 \mathrm{~Hz}$.

## Noise:

-80 dB of range
Phase Angle:

| Range: | 0 to $+359.9^{\circ}$ (Lead) $/ 0$ to |
| :--- | :--- |
|  | $-359.9^{\circ}$ (Lag) |
| Accuracy: | $\pm 0.25^{\circ}$ at $50 / 60 \mathrm{~Hz}$ |
| Resolution: | $\pm 0.1^{\circ}$ at $50 / 60 \mathrm{~Hz}$ |

Frequency:
Range: dc; ac from
0.1 Hz to 10 kHz

| Accuracy: | From $0^{\circ}$ to $50^{\circ} \mathrm{C}$, |
| :--- | :--- |
|  | $\pm 0.0005 \%$ or $\pm 5 \mathrm{PPM}$; at |
|  | 60 Hz |
|  | frequency accuracy is |
|  | $\pm 0.0003 \mathrm{~Hz}$ |
| Manual Ranges: | dc; ac: base frequency of |
|  | $50 / 60 \mathrm{~Hz}$, up to 20th and |
| the 100 th harmonic |  |

F2010 Minicontroller/Automation Ranges and Resolutions:
Range: $\quad 0.1$ to 9999.9 Hz
Range is dependent on the frequency selection on the simulator. When the frequency selection on the simulator is $60(50) \mathrm{Hz}$, range is 0.1 Hz to 99.999 Hz with 0.001 Hz resolution. When a higher level of harmonic is selected on the simulator, then the range is the base range ( $0.1-99.999 \mathrm{~Hz}$ ) multiplied by the selected level of harmonic, and the resolution is equal to the order of the harmonic times $(0.001 \mathrm{~Hz})$.
Example 1: If the base frequency selection is 120 (or 100 ) Hz , which is the second harmonic, then the range is 0.2 Hz to 199.99 Hz with a resolution of 0.002 Hz .
Example 2: If the base frequency selection is 300 (or 250) Hz, which is the fifth harmonic, then the range is 0.5 to 499.99 Hz with a resolution of 0.005 Hz .
RAMP/SET:
RAMP: Continuously increments/decrements voltage, current, and phase angle at different ramp rates. Insures smooth, linear changes in value carried to next significant digit, by changing the least significant digit.
Ramp Rates: »Least Significant Digits per Second (L.S.D./s).
Amplitude: 1,5,10, 100 and 1000 L.S.D./s
Phase Angle: 1,2,5, 360 L.S.D./s.
SET: Individually sets each digit, with next significant digit carry over.

## General Specifications - continued

Logic Outputs:
Two sets of galvanically isolated Logic Outputs, each set has a normally open (Form A) terminal, shared common terminal, and a normally closed (Form B) terminal.
$\left.\begin{array}{ll}\text { Switching Power: } & \begin{array}{l}10 \text { watts maximum } \\ \text { Input Voltage: }\end{array} \\ \text { 300 V-dc and (or ) } \\ \text { ac peak maximum }\end{array}\right\}$

Logic/Signal Inputs:
Two sets of galvanically isolated Logic/Signal Inputs, each set has a voltage sensing terminal for ac or dc voltage, a shared common terminal, and a dry contact sensing terminal.

| Contact Sense Mode, for dry contacts: |  |
| :---: | :---: |
| Open Circuit Test Voltage: 30 volts nominal |  |
| Short Circuit Test | 90 mA nominal |
| Threshold: | 460 ohms nominal |
| Voltage Sense Mode, for ac and dc voltages: |  |
| Input Voltage: | 420 volts dc and (or) peak ac maximum |
| Input Impedance: | 100 K ohms nominal |
| Threshold: | 1.5 volts |

Multi-Mode Digital Timer:
Accuracy:

Resolution:

Ranges:
$\pm 0.0005 \%$ of reading, $\pm$ one least significant digit, $\pm 50$ microSeconds. 10 microSeconds. (1 least significant digit).
0-9999.99 milliseconds;
0-9999.99 seconds; 0-9999.99 cycles;
GPS time of day may be displayed when using the F2895 GPS Option
Line Power Supply:
105-132 V or 210-264 V (field selectable) at $47-63 \mathrm{~Hz}$
Operating Temperature: $0^{\circ}$ to $50^{\circ} \mathrm{C}$
Storage Temperature: $-25^{\circ}$ to $+70^{\circ} \mathrm{C}$
Humidity: Up to $95 \%$ relative humidity, non-condensing.

Displays: $0.3^{\prime \prime}$ High Intensity filtered LED
Interfaces:
RS232 remote control to PC
IEEE 488 instrument inter-communications network

D232 for F2010 Minicontroller
External Signal inputs for voltage and current conditioning amplifier

Battery Simulator (optional):
$\begin{array}{ll}\text { Range: } & 48 \mathrm{~V}, 125 \mathrm{~V}, 250 \mathrm{~V} \text {-dc } \\ \text { Power: } & 60 \mathrm{w}\end{array}$
Enclosure:
High impact, molded, flame retardant ABS

- Meets National SafeTransit Association testing specification

No. 1A for immunity to severe shock and vibration

Dimensions:
$9.5 \times 19.75 \times 22$ inches or $24 \times 50 \times 55.8 \mathrm{~cm}$
Weight:
$50 \mathrm{lbs} . / 22.7 \mathrm{~kg}$
Audible Noise:
Measured at 2 meters: ANSI Type 2
Typically: Front: 52.5 dBA Rear: 55 dBA L.H.: 54 dBA
R.H.: 52.5 dBA
