## 10MHz 1×4 Multiplexer Card

## 9 Independent $1 \times 42$-Pole Multiplexers

The Model 7035 9-Bank Multiplexer Card has nine $1 \times 4$ multiplexers. The switch contact configuration for each channel is 2-pole form A. The card's nine banks can be combined for a wide variety of switching configurations using external connections. This flexibility makes the Model 7035 well-suited for production testing of a variety of telecommunications products and systems and low power portable devices.
