MCT1600
Current Transformer Saturation, Ratio and Polarity Test Set

One button automated test: Demagnetization, CT Ratio, Knee Point, Saturation, Polarity and Phase Deviation Test

Displays multiple instantaneous Saturation Curves with Knee Point

Integrated 1 kV DC insulation test system

Color daylight viewable graphical display

“Save & Print Later” with USB stick

Fast data entry using full QWERTY keyboard

1600 VAC Saturation Test Voltage

Automatic or manual testing selectable

DESCRIPTION

The Megger MCT1600 test set is a lightweight, robust, portable unit used to automatically or manually perform saturation, ratio, polarity, demagnetizing tests and insulation tests on current transformers. The MCT provides a microprocessor controlled variable voltage output and precision instrumentation for automatically testing single and multi-ratio CTs. The MCT1600 possesses microprocessor controlled output voltage with precision instrumentation and storage, reducing testing time and increasing productivity. All three tests – saturation, ratio and polarity – can be performed with the push of a button and without changing leads. The MCT1600 has a large display, permitting the user to easily read all pertinent data while the test is being performed and providing the ability to view the current transformer’s saturation curve.

Current transformers can be tested in their equipment configuration, such as being mounted in transformers, oil circuit breakers or switchgear. It is necessary for the equipment to be completely isolated from the electrical system prior to testing.

APPLICATIONS

Saturation Test
With the single push of a button, The MCT1600 performs a CT saturation test and calculates the rated knee point. The saturation test is performed at mains rated frequency of 50 or 60 Hz as required by IEC regulations. The MCT1600 will calculate the rated knee point in compliance with IEEE C57.13.1, IEC 60044-1 or IEC 60044-6. While the saturation test is being performed, The MCT will plot the CT saturation curve on the large graphical display and automatically provide the user with the rated knee point per the desired IEEE or IEC standard. Many substation CT’s include a multi-ratio secondary, therefore the MCT1600 has the ability to plot and simultaneously display up to 10 CT saturation curves.

Ratio Test
Ratio testing is performed by comparing a voltage applied to the secondary winding to the resulting voltage produced on the primary winding. For example, if 1 volt per turn is applied to the secondary winding, the voltage...
present on the primary winding would be 1 volt. More specifically, if 120 volts were applied to the secondary of a 600/5 current transformer (120:1 ratio), 1 volt would be present on the primary winding. This test is performed automatically during a CT saturation test or manually with the output control knob and metering display. The MCT1600 will also provide the operator with a direct reading ratio, thus removing the need to calculate CT ratio manually.

**Polarity Test**

Polarity of the current transformer under test is indicated to the operator by a simple “Correct” or “Incorrect” indication on the display accompanied by the measured phase angle.

**Demagnetization**

Normal operating conditions and typical winding resistance measurements can cause a CT to become magnetized. The MCT1600 has the ability to automatically demagnetize the CT under test. This automatic demagnetization routine is useful to ensure that the CT Saturation test yield correct results. Prior to testing demagnification is recommended per ANSI C57.13.1.

**Insulation Resistance Test**

In order to ensure that the CT secondary wiring is properly insulated, the MCT1600 system includes a 500/1000V insulation resistance test system. This test ensures that the CT secondary winding and secondary wiring is properly insulated per ANSI C57.13.1.

**Note:** Disconnect all electronic loads before performing this test.

**Data Storage and Printing**

The MCT1600 test system not only permits accurate and automated CT testing, but also catalogues and stores test results within the instrument for simple retrieval by software at a later date. All catalogued test results can be uploaded to Megger’s PowerDB™ Lite for report generation and saturation curve plotting on a computer. PowerDB Lite also has the ability to operate the MCT1600 with no operator intervention, thus providing a completely computer controlled automated test system.

The operator also has the option to print any catalogued test results immediately using an optional printer, providing hard copy of test reports immediately upon CT test completion.

Onboard memory allows complete test results and data to be stored in one complete file, permitting easy access to quick construction of reports such as saturation curve with knee point. The MCT1600 test file is saved in a Microsoft XML format, thus the data is available to any application that will accept an XML format.

**Upgradeability**

The MCT1600 includes the ability to upgrade the user interface and testing capability using updates supplied on a USB memory device and a simple “upgrade” command. This upgrade capability permits the MCT1600 system to improve as new testing needs are developed.
FEATURES AND BENEFITS

- **Large Display** - The large graphical display provides the user with immediate, easy to read test results including a plot of the CT saturation curve. This display also provides the user with simple, easy to read test results for Ratio and Polarity Test.

- **CT Saturation, Ratio and Polarity Automated Testing** - The microprocessor-controlled output fully automates testing of CT’s. This automated testing simplifies CT testing and reduces testing time. Automated testing is accomplished directly on the MCT1600 or via the included MS Excel macro.

- **CT Demagnetization** - During operation and routine DC winding resistance testing, it is possible for a CT to become magnetized. The MCT1600 includes an automated CT Demagnetization function, which allows determination of accurate Knee Point as well as stable, repeatable test results, and reduces test time.

- **Insulation Test** - The MCT1600 includes a 500/1000V insulation test system to verify the CT secondary winding and secondary wiring. This insures that the secondary insulation has not degraded and will continue to perform its function during high current faults.

- **Complete CT Testing** - The MCT1600 system provides a complete CT saturation, ratio and polarity test. Eliminating the need for multiple pieces of test equipment to perform a CT test. All test are performed in compliance with IEEE C57.13.1 test guidelines.

- **Full QWERTY Keyboard** - The field ruggedized full QWERTY keyboard simplifies nameplate data input.

- **Test Result Report** - The MCT1600 offers storage of complete test files in an easy-to-use, versatile format that permits upload to PowerDB Lite, or printing test results using the optional external printer. These options provide a simple, complete, easy way to store over 200 test results and saturation curves. All test results can be catalogued and stored in the MCT1600.

- **High Voltage Warning Indication** - The MCT1600 can produce a high voltage output. To ensure the safety of the user, a high voltage warning is issued via both the MCT1600 and the PowerDB Lite interface prior to the presence of any output test voltage.

- **Manual Operation** - The MCT1600 is also supplied with a manual voltage output control knob. This permits the user to perform any test required manually if only a spot check is required. This allows the user to ensure that test results are correct, assisting in diagnosis of a faulty CT.
SPECIFICATIONS

Input
100 to 265 V, 1ø, 50 or 60 Hz, 15 A max.

Output
Continuously variable in six ranges:
- 0 to 40 V at 2.0 A max (1 minute on 15 minute off)
- 0 to 160 V at 2.0 A max (1 minute on 15 minute off)
- 0 to 800 V at 1.5 A max (3 min on, 15 min off)
- 0 to 1600 V at 1.0 A max (3 min on, 15 min off)

Instrumentation

Voltmeters
Output
4½ digit, auto-ranging
Resolution: 0.0000 to 1.9999/19.99/199.99/1999.9
Ranges: 0 to 40/160/800/1600 V
Accuracy: ±0.5% of reading and ±5% range typical
±1% of reading and ±1 V maximum

Input
4½ digit, auto-ranging
Ranges: 0 to 2/600
Resolution: 0.0000 to 1.9999/199.99/1999.9
Accuracy
2 V Range: ±0.5% of reading and ±0.25% range
600 V Range: ±0.5% of reading and ±0.5% range

Ammeter
4½ digit
Range: 0.0000 to 1.0000 A/5.000
Accuracy: ±0.8% of reading and ±1 LSD

Phase Angle
3 digits
Range: 0 to 360 degrees
Accuracy: ±1 degree

Ratio
Range
0.8 to 5000
Accuracy
±0.4% typical
±0.8% maximum

Insulation Test
Test Voltage: 1000 VDC, 500 VDC
Measuring Range: 10 kΩ – 99 MΩ
Short Circuit Current: 1.5 mA nominal
Test Current on Load: 1 mA at min. pass values of insulation
(as specified in BS7671, HD 384 and IEC 364)
Accuracy:
±3% ±2 digits up to 10 MΩ
±5%, up to 100 MΩ
±30% up to full scale

Communication Interfaces
USB
Ethernet

Environment
Operating: -10º C to 40º C
Storage: -30º C to 70º C

Enclosure
The unit is housed in a rugged enclosure suitable for use in outdoor substations.

Standards
IEC 61010
CSA 22.2
CE

Dimensions
7.5” H X 19.25” W X 15” D
(190 H X 489 W X 940 D mm)

Weight
47.6 lb (21.6 kg)
