# Racal Instruments ${ }^{\text {TM }}$ $1260-64 \mathrm{~A} / \mathrm{B} / \mathrm{C}$ 18 GHz Microwave Switch Module 

The Racal Instruments ${ }^{\text {TM }} 1260-64$ is a double-slot, C-size VXIbus module with up to four SP6T, $50 \Omega$ coaxial switches. It is optimized for high-performance, high-density, low-noise switching of signals up to 18 GHz .

## Product Information

The 1260-64 is ideal for switching signals used in modern communications systems, including Cellular, PCS, and Satcom applications. It is also ideal for ATE systems designed for testing Military telecommunications, surveillance, and related equipment.

User connections are made directly to the relay SMA connectors at the front panel, eliminating cumulative losses and induced noise. A specially designed, deep-slotted socket ( $1 / 4^{\prime \prime}$ drive) is also available to connect/disconnect the SMA interface connectors quickly and easily.

Microwave switch relay coil currents are monitored to provide additional assurance of proper relay operation. Operating life for the relay is $1,000,000$ cycles minimum.

The 1260-64 also contains 32 SPST relays in groups of 16 to drive external devices. These relays utilize the internal supplies ( $+5 \mathrm{~V},+12 \mathrm{~V},+24 \mathrm{~V}$ ) or an external supply to drive any device.
Terminated switch versions, designated with an " S ", are available for applications requiring switches that self-terminate to $50 \Omega$. The $1260-64$ T is available in two
configurations with 3 or 4 SP6T (singlepole six-throw) terminated relays. Other configurations are possible by special order; contact the factory for a quote.
The 1260-64 requires a Racal Instruments ${ }^{\text {TM }}$ Option 01T to communicate with the switch cards. This option additionally provides message-based operation for ease-of-use and registerbased operation for maximum speeds. Racal Instruments 1260 line includes drivers for LabWindows ${ }^{\text {T™ }} / \mathrm{CVI}$ and LabVIEW ${ }^{\text {TM }}$ for VXI applications. It also includes VXIplug\&play compliant support for frameworks based on Microsoft Win32 ${ }^{\circledR}$ application programming interface.
