

Portable High-Density Network Performance Analysis System

SmartBits® 600B

Product Overview

Spirent Communications' SmartBits 600B chassis is an improved version of the SmartBits 600. The SmartBits 600B is the industry's most portable and compact, highport-density-for-its-size network performance testing system. Compatible with all of the SmartBits 600x/6000x family of chassis, the SmartBits 600B holds up to two modules that can support up to 16 10/100 Mbps Ethernet ports, 8 Gigabit Ethernet ports, 1 10GbE port, 4 Packet over SONET (POS) ports, 4 Fibre Channel ports, or a mixture of these port types.

SmartBits 600B chassis can be daisy-chained together to achieve higher port density; enabling users to perform automated large-scale testing in Quality Control and highvolume production environments. Up to 512 chassis can be synchronously connected by using SmartBits multichassis extension units.

The SmartBits 600B is easily controlled by a host computer through a 10/100 Mbps Ethernet connection and uses a Windows®, Linux, or Solaris-based interface.

The SmartBits 600B is Designed For:

■ Network Equipment Manufacturers: Test your device in the lab, then carry it along with a SmartBits 600B, to your customer site to prove your device's performance.

- **Evaluation Labs:** Test and certify different devices from various manufacturers to benchmark their perform-
- Telcos/ISPs/Enterprise Users: Perform comparative analysis of network equipment to determine the suitability of a specific application prior to deployment.
