## 500 MHz Phase Locked Oscillator

## Features

- Low Phase Noise
- Modular Design
- Excellent Spectral Purity
- Power Level Detectors
- Custom Specifications Readily Available

## Applications

- Airborne Integration
- Frequency Distribution
- Low Noise Reference Source
- Liquid Cooling Option

This low phase noise frequency source generates and distributes $25,100 \mathrm{MHz}, 1,1.2$, and 2 GHz signals. The RF outputs are organized in a single row on the front of the unit along with power and ground interfaces. Included with this system are power level detector BITS for each output for monitoring purposes. The phase noise performance of this system is derived from an Ultra Low Noise Crystal Oscillator and integrated Low Noise Multipliers and Dividers.
